

Jhabua Power Ltd.											
XXXX/E-TENDER NO- XXXX											
Jhabua Power RFP NO: XXXXXXXXXXXXXXXXXXXXXXXX											
Annexure 2 -Functional Requirement Specification (FRS) of ERP Solution											
Note:		i) Please provide the required information and upload the relevant documents (in soft copy/scanned copy, as applicable) in support of the respective answer (and also submit the same in physical form). ii) Please indicate for each individual item below, how the ERP solution offered by the Bidder complies the functional requirement(s) specified therein? Please indicate your response as one of the following for iii) Bidders are requested to fill the data, only in the cells highlighted with yellow color.									
Name of the Firm/company, M/s:-											
Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
			S	C	TP	NS		Module	Sub Module		
		Please indicate for each individual item below, whether the ERP solution offered by the Bidder complies the functional requirement(s) specified therein?									
A	1	Finance Management									
	1.1	The system should have an ability to capture and create a Repository of all circulars, manuals, other related documents. (including amendments from time to time) which can be accessed in a structured manner while carrying out the finance functions? (For example, a document management facility with indexing and search capabilities)									
	1.2	The system should be capable of providing financial information on a need to know basis. Hence there should be adequate provision for specific roles and authorisations to the users.									
	1.3	The system should be capable of providing OpEx budget management and Funds management.									
	2	Establishment and administration of codification requirements									
	2.1	The system should have an ability to generate and maintain unique codification structure for budgeting, cost accounting and financial accounting purposes									
	3	Annual financial planning and budgeting									
	3.1	The system should have an ability to support different formats for budget preparation and to prepare and generate budget work head wise, budget head wise and system head wise									
	3.2	The system should have an ability to capture data including commitment data on construction activities and actual <u>cash-payout</u> data on construction activities at utilization stage and also at commitment stage i.e. during a commitment to incur expenditure occurs									
	3.3	Ability to prepare Budget Estimates for current year as well as Revised Estimates for the previous year grouped under various budget heads									
	3.4	Ability to support the phasing of yearly budget into monthly targets. The phasing should match with the planned physical progress									
	3.5	The system should have the provision for monthly reporting of budget utilisation based on user defined parameters (Budget reporting must include actuals, a choice of budgets, commitments etc)									
	3.6	The system should have the provision for re-appropriation of budget from one budget head to another but within the overall approved budget									
	4	Treasury Management									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	4.1	Ability to generate <u>Fund</u> Flow Statement (both short term and long term) considering the inflows/out flows, and projected flows									
	4.2	The system should have the provision of cash flows being monitored type-wise (i.e.accounts receivable, account payable etc.) bankwise, location wise									
	4.3	The system should have the provision of actual cash flows with reference to committed flows be identified for recasting the cash flow statement									
	4.4	The system should have the provision of fund to be marked / allocated for different types of payments considering the priority, timeline details									
	4.5	The system should have the ability to import bank statement and bank balances for reconciliation purposes from an external banking application, addressing the data security aspects and should have E-BRS wherein the data is taken/delivered from the bank and uploaded onto the reconciliation system electronically.									
	4.6	The system should have the provision of automatic entries be created for direct bank credits and debits like interest, bank charges etc.									
	4.7	The system should have the provision of post dated cheques be catered, so that it can be accounted for once the cheque becomes valid									
	4.8	The system should have the provision of recording all transactions of receipts and payments by way of cheque and be related back specific bank accounts maintained by the Company									
	4.9	The system should have the provision for change in Net Present Value (NPV) status be tracked based on alternative investment proposals. The system should generate various alternative investment models and identify the best model in terms of Maximum NPV so that investment decisions can be made									
	4.10	The system should have the provision of facilitating use of pre printed cheque stationary and also allow manual cheque preparation									
	4.11	The system should have the provision of creating auto entry for stale cheques i.e. on expiry of user defined validity period									
	4.12	The system should have the provision of maintaining exposure limit (for borrowings) by instrument and institution									
	4.13	The system should have the provision to maintain bank wise LC (Letter of credit) limits									
	4.14	The system should have the provision for loans to be raised by the company on discount/premium which needs to be accounted for as per IND AS. Provision should also be available to amortize the premium /discount over the life of the loan									
	4.15	Ability to generate encrypted E-file for upload into the Bank Portal									
	4.16	Ability to link up with the Bank Portal to facilitate Host-to-Host communication with the bank portal									
	4.17	Bank Guarantees Management Including MIS									
	4.18	FDR Management/Investment Management including MIS									
	5	Accounts Receivable									
	5.1	The system should have the provision to raise invoices in a user defined periodic schedule									
	5.2	The system should have the provision to generate calculation sheets which are required for verification of invoices by customers									
	5.3	The system should have the provision to raise supplementary invoice									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	5.4	The system should have the ability to raise invoices with retrospective effect as in the case of revision of tariffs with retrospective effect									
	5.5	The system should have the provision to raise claim for surcharge for be generated in user defined format and accounted for only when prompted									
	5.6	The system should have the provision for calculation sheets be generated for rebate payable and surcharge receivable for verification									
	5.7	The system should have the provision for reports indicating the component wise (like energy charges, surcharge and other pass throughs) outstandings be generated to facilitate reconciliation of accounts with customers									
	6	Accounts Payable									
	6.1	System should be capable to capture LC payment to vendor and final payment for LC to the bank and bank charges.									
	6.2	System should be capable to track multiple Fixed deposit open in bank against LC and all LC payment list against subsequent FDs.									
	6.3	The system should have the provision for open invoices be linked in a logical order (first in first out) for processing of payment									
	6.4	The system should have the provision for holding of payment for one or more invoices , for any reason (Proper recording and tracking is to be maintained)									
	6.5	The system should have the provision for invoices be prioritised for payment									
	6.6	The system should have the provision for release of part payment against an invoice. (The balance payment retained may be released on happening of a subsequent event)									
	6.7	The system should have the provision for ad-hoc payments, with out link to invoices, be made and the link will be made subsequently									
	6.8	The system should allow generation of automated SMS/ mail/ other communication to vendors for their invoices. A system of tracking of invoices by vendors									
	6.9	The system should have the provision for tracking payments against purchase documents									
	6.10	The system should have the provision for payments be authorized prior to payment as per guidelines/ Internal Working Arrangements and as per internal working arrangements, the authorization of payments is controlled hierarchically depending upon the amount payable.									
	6.11	The system should have the provision for deductions from invoices be recorded with reasons for intimating to the vendor / contractor									
	6.12	The system should have the provision for separate Priced Stores Ledgers be maintained for stores items and fuel (Priced Store Ledger is a ledger that maintains quantity wise and value wise details of receipt and issues of material and inventory)									
	6.13	The system should have the provision for maintaining separate Priced Stores Ledger for imported items, as the information is to be disclosed separately in the financial accounts									
	6.14	The system should have the provision to absorb to the cost of purchase, the cost of conversion and other costs incurred in bringing the inventories to the present condition and location									
	6.15	The system should have the provision for provisional valuation of receipts of stores items possible									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	6.16	The system should have the provision for tracking of the material issued to contractors for adjustment in the work/bills and for identification of inventory with contractor be maintained									
	6.17	The system should have the provision to record and account discrepancies arising out of physical verification of inventories									
	6.18	The system should have the provision for various kinds of material issues for work / material returns from work be valued as per user defined logic									
	6.19	The system should have the provision for transfer of material from one work to another be traced for adjustments in accounts									
	6.20	The system should have the provision for normal loss and abnormal losses of material issued to contractors for use in work be treated according to user defined logic									
	6.21	The system should have the provision for treating the transfer from main stores to sub stores as stock transfer and account for as issues for consumption only on issue to work from sub stores									
	6.22	The system should have a provision for creating provision for taxes against expenses accounted									
	6.23	The system should have the provision for tracking the payments made to the vendor and generating a consolidated report that shows the amount Invoiced , paid, retained against a bill									
	6.24	The system should have the provision to have excise duty in the Invoice itself in case of excisable goods and the system should be linked with the extant tax system									
	6.25	The system should have the provision to have excise duty in the Invoice itself in case of excisable goods and the system should be linked with the GST requirements									
	6.26	The system should have the provision for file Statutory Returns/ Challans based on GST from the system									
	6.27	The system should have the provision for file Statutory Returns/ Challans based on extant tax system									
	6.28	The system should have the provision to implement the Dual tax structure (GST as well as non-GST) considering goods that would not be subject to GST (e.g. Electricity)									
	7	Processing of establishment payments & processing of Payroll									
	7.1	The system should have the provision for work flow support be made available between the two systems for processing the claims etc of the employees									
	7.2	The status of reimbursements / claims to the employees to be available to the employees									
	7.3	The system should have the provision to track advances and net of against claims submitted									
	7.4	The system should have the provision for calculating the salaries in a timely and accurate manner based on guidelines issues by HR									
	7.5	The system should have the provision for Indian version of pay roll system. Please mention version details etc.									
	7.6	The system should comply for Indian version of pay roll system. Please give references of Indian version of Pay roll system implemented in - Any Indian company - Any Public Sector Undertaking (PSU) in India									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	7.7	The system should have the provision for the payroll be flexible to rapidly accommodate changes and effect payments when the pay structure changes. The changes may result in payment with retrospective effect and payment of arrears									
	7.8	The system should have the provision for statutory deductions like Provident Fund, pension and income tax be tracked for per employee and necessary documentation requirements be met simultaneously									
	7.9	The system should have the provision for earnings card of employees showing the details of earnings and deductions be maintained									
	7.1	The system should have the provision for validation of changes in salary rate due to increments, promotions, refixations etc									
	7.11	The system should have the provision to suspend salary processing of identified employees									
	7.12	The system should have the provision for monthly gross pay variance be effectively calculated for review									
	7.13	The system should have the provision for processing the claims without any paperwork by employees									
	8	Fixed Asset Accounting									
	8.1	The system should have the provision for tracking the status & financial information of assets prior to capitalization i.e. in the Capital Work In Progress (CWIP). CWIP includes many works identified by different account codes. The status is required for allocation of "Expenses During Construction" to individual CWIP accounts prior to Capitalization									
	8.2	The system should have the provision for phased capitalization possible, as different works in a system may get completed at different point of time and hence qualify for capitalization									
	8.3	The system should have the provision for assisting in capitalization of many assets purchased at a consolidated price									
	8.4	The system should have the provision for assist in capitalization of common assets with individual generating Units									
	8.5	The system should have the provision for costs related to the asset be allocated to directly attributable cost of the asset based on pre-defined logical sequence									
	8.6	The system should have the provision for the material issued to contractors be tracked material code wise for capitalizing along with the assets and for ascertaining the material lying with contractor									
	8.7	The system should have the provision to calculate depreciation as per provisions of Indian Companies Act as well as CERC Provisions for recording in the books of accounts									
	8.8	The system should have the provision for calculating depreciation as per provisions of Indian Income Tax Act for tax purposes. The system should handle the Income tax Depreciation along with normal depreciation of Companies Act									
	8.9	The system should have the provision for identifying the assets getting impaired as per the accounting standard (IndAS), and provide for the Impairment of Assets through the system keeping in view the requirements of IndAS									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	8.10	The system should have the provision for a separate gross block required for the purpose of tariff to be maintained. This Gross Block is not the same as is accounted. Depreciation is required to be calculated for the purpose of tariff calculation on this gross block. The system should allow for maintenance of separate gross blocks for the same asset									
	8.11	The system should have the provision for calculating depreciation as per the requirements of Central Electricity regulatory Commission for disclosure purposes									
	8.12	The system should have the provision for charging higher depreciation than as prescribed by the Companies Act. This can be due to re valuation of assets based on technical assessment or any other reason									
	8.13	The system should have the provision for facilitating flexibility in charging depreciation where ever the cost adjustment to asset takes place after initial capitalization									
	8.14	The system should have the provision for fixed assets be controlled by way of allotting Asset Identification Numbers to facilitate identification of individual asset, location, facilitate transfer to other location, stations, to facilitate retirement, disposal and to facilitate periodic physical verification. Fixed Asset Register is to be maintained in the prescribed format									
	8.15	The system should have the provision for Fixed Asset Register be maintained in the a user defined format									
	8.16	The system should have the provision for regrouping of assets necessary for insurance valuation be available in the system									
	8.17	The system should have the provision for recording physical inventory and for identifying the deviations from inventory as per Fixed Asset Register									
	8.18	The system should have the provision for fixed assets sent to outside agencies for repair or for other reasons be tracked									
	8.19	The system should have the provision for calculating Indian capital gains tax, if any, on sale of fixed assets									
	8.20	The system should have the provision for helping in the physical verification of the Assets									
	9	General Ledger									
	9.1	The system should have the provision for Chart of Accounts be created as per user Defined logic which enables account grouping									
	9.2	The system should have the provision for codes be added to the existing chart of accounts and a validation report be created as an audit trail									
	9.3	The system should have the provision for maintenance of individual account and account group balances for user defined intervals (say monthly) for current year as well as prior years possible									
	9.4	The system should have the provision for Inter unit transactions between Corporate office, Regional offices, other offices, projects and stations be reconciled periodically									
	9.5	The system should have the provision for Corporate office and Regional office expenses be allocated to generating stations and projects on user defined logic									
	9.6	The system should have the provision for memo entries be included for preparation of periodic financial statements other than the financial year end statement									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	9.7	The system should have the provision for periodic and year end closing of accounts be done as per user defined closing calendar									
	9.8	The system should have the provision for closing balance of the financial year be carried forward as opening balance to the next financial year automatically									
	9.9	The system should have the provision for allocation of common expenses to generating stations and projects (which are in concurrent phase) on user defined logic possible									
	9.10	The system should have the provision for consolidation of accounts of generating stations, projects and other offices of the company be done (line by line) at trial balance stage									
	9.11	The system should have the provision for facilitating generation of financial statements in accordance with requirements of IndAS/ IFRS /US GAAP (Generally Accepted Accounting Principles)									
	9.12	The system should have the provision for preparing a reconciliation statement between financial statements as per companies Act and financial statements as per IFRS /US GAAP									
	9.13	The system should have the provision for facilitating consolidation of financial statements of group companies which may be in different currency and may be operating with different Chart of Accounts									
	9.14	The system should have the provision for presentation of Financial statements as per provisions of Indian Companies Act and the requirements of Indian Accounting Standards/IndAS/IFRS be facilitated									
	9.15	The system should have the provision for providing facility for keeping open the books for more than one financial year									
	9.16	The system should have the provision for facilitating comparison of financial statements between years, months and up to a particular period in current financial year and previous years									
	9.17	The system should have the provision for previous year figures are to be picked up automatically in current year financial statements and provision for re grouping of previous year figures									
	9.18	The system should have the provision for various accounting ratios be prepared and analyzing the financial reports									
	9.19	The system should have the provision for maintain daily Cash & Bank book, petty cash book , sub ledger and GL balances									
	9.20	The system should have the provision for facilitating voucher management?(Voucher management includes voucher numbering at section and GL level, procedure for voucher updation and cancellation, authorization of vouchers as per Internal Working Arrangement etc.)									
	10	Cost Accounting									
	10.1	The system should have the provision for apportion of costs on user defined parameters in cases where the cost cannot be directly identified with any cost centre but is of common in nature (for example employees working in more than one cost centre)?									
	10.2	The system should have the provision for cost centre wise, account code wise roll up /drill down									
	10.3	The system should have the provision for generating costing details at multiple levels like a single generating Unit in a station, a single generating station, a group of generating stations in a Region, Consolidated at company level									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
			S - Standard	C - Customization/Configuration	TP - Third-Party Solution	NS - Not Supported / No Solution					
	10.4	The system should have the provision for analyzing cost variances against the budgeted costs									
	10.5	The system should have the provision for providing the reports as per Cost Accounting Record Rules									
	11	Taxation									
	11.1	The system should have the provision for supporting Indian version of Taxation									
	11.2	The system should have the provision for to keep tracking of the tax implications in the case of material issued to contractors? (Tax is to be recovered from contractors for material issued to them on cost recoverable basis. The tax recovered is to be deposited to the statutory authorities with in the prescribed time.)									
	11.3	The system should have the provision for generating system alert to user for deposit of tax in time									
	11.4	The system should have the provision for tax be deducted on advance payments and provisions									
	11.5	The system should have the provision for submitting periodic returns to different authorities in the prescribed formats									
	11.6	The system should have the provision for adjustment of excess tax recovered									
	11.7	The system should have the provision for changing the tax rate ,tax base as and when the amendments take effect in line with Indian tax Laws									
	11.8	The system should have the provision for taking care of CGST and SGST requirements. Further the system should be able to provide challans, statutory returns and invoices handling									
	11.9	The system should have the provision for filing GST returns including GST under RCM									
	11.10	The system should have the provision for taking care of the returns to be files for Local taxes / State level taxes and their compliance									
	12	Audit									
	12.1	The system should have the provision for maintaining audit trails of all financial transactions									
	12.2	The system should have the provision for ensuring internal controls and internal checks in all financial transactions									
	12.3	The system should have the provision for internal controls that can be applied to prevent fraud in the company through the System itself									
	12.4	The system should have the provision for providing details regarding violation of Segregation of Duties									
	12.5	The system should have the provision for Segregation of Duties be enforced automatically / through a workflow									
	12.6	The system should have the provision for enforcing access / process controls through the system									
	12.7	The system should be able to check for the viability of process through application of process controls									
B	1	Energy Billing and Accounting									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.1	The system should have provision for Sourcing /submission of data connected with generation of electricity in 15 minutes time block such as Declared Capability (DC), Schedule Generation (SG), Actual Generation (AG) and frequency etc. from Regional Load Dispatch Centre(RLDC) and generating station. Also Station DC and Contract wise DC & SG should be recored seperatly for each beneficiary on monthly basis.									
	1.2	The system should have provision for capturing of revisions of above mentioned data i.e. 1.1 and subsequent correction in 15 minutes time block									
	1.3	The system should have provision for all the parameters related to reporting e.g difference in generation data up to 15- minute block level etc and other MIS reports									
	2	Energy Billing & Invoicing for Main energy billing, Unscheduled Interchange / Deviation Settlement & Reserve Regulation and Ancillary Services (RRAS)									
	2(a)	UI/DS/REC/RTDA/SCED/AGC, congestion charges and RRAS Billing									
	2(a).1	The system should have a provision to bill and invoice UI /DS/REC/RTDA/SCED/AGC & RRAS as per CERC regulations and should have the provision of sub ledger accounting									
	2(a).2	The system should have the provision for revision of bills/invoice									
	2(a).3	The system should have the provision of Loading of data for billing, billing simulation, creating bill, invoicing and sub ledger accounting of the billing model stated in 2(a).1									
	2(b)	Main Billing / Revision Billing									
	2(b).1	The system should have a provision to bill and invoice as per CERC ABT regulations and should have the provision of sub ledger accounting									
	2(b).2	The system should have provision for management of different versions of these business models created, centrally stored and delimited by a period such as , MPERC(2014-19),MPERC and CERC both for period 19-24. MPERC and CERC (5th Sep 2022 onwards) regulation are applicable. Beyond, 2024 only CERC regulation are applicable as well as any future Regulation									
	2(b).3	The system should have provision for loading of data for billing, billing simulation, creating bill, invoicing and sub ledger accounting of the billing model stated in 2(b).1									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	2(b).4	The system should have provision creation of above bills based on various billing rates, Energy Charge rate, Capacity Charge, FPA, MOPA, Interest etc. Its computation logic shall be provided by vendor based on the CERC regulations. Facility to compute the above from basic inputs received from the system/module/function. Such calculations will use billing rules like fixed charges, variable charges, supplementary components etc. as provided in the energy business model and input from the REA . (a) System could also be capable of computing Ash reimbursement billing expenses, computation of sharing to be done with the beneficiaries in case their contracted power is sold in the market, LPSC calculation & billing as per extant regulations. (b) for Sec-63 PPAs , system should have adequately modality to capture changes in tariff like: -- linking to WPI (generally yearly revisions) -- Trading margins to be considered in billing -- Provision for input Tx-charges and losses as and when revised (C) system should be capable for weekly invoicing. NOTE: - Fixed and variable charges: These charges are based on energy business model, tariff notification and REA. Revisions are based on changes in inputs. - Fuel Price Adjustment (FPA) and Monthly Operating Parameter Adjustment (MOPA): These are calculation based on tariff notifications and monthly fuel related data (Price Store Ledger value and Gross Calorific Value etc.)received from generating station. - Calculation of supplementary components like advance tax, water cess, electricity duty, etc: Based on actual payment to various agencies e.g. state Govt. etc, supplementary components are billed to customers on a pro-rata basis.									
	2(b).5	The system should have provision for revision of any past period billing. Module/Function availability for the same billing, invoicing, sub ledger accounting is required									
	2(b).6	The system should have provision to raise provisional billing based on previous billing data									
	2(b).7	The system should have provision of MIS reports for billing, energy, sales accounting etc. deriving from actual billing / invoicing and considering any revision in the billing									
	3	Receivables collections management									
	3.1	The system should have provision for collection management of outstanding receivables (For example, this could be through the use of aged receivables information, notes and actions regarding each account) While information on accounts receivables should be available through finance, collection management should be able to be undertaken through the commercial department									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	3.2	The system should have provision for providing system realization/collection of energy bills as per the following: i) Procedure based Jhabua Power Ltd. rebate and surcharge schemes ii) Back to Back settlement of rebate to the generating stations on power receiving basis iii) Collection to be settled & shared among generating stations as per their sale-balance ratio after rebate is settled									
	4	LC Management									
	4.1	The system should have provision for maintaining bank wise LC (Letter of credit) limits									
	4.2	The system should have provision for calculation of required LC level beneficiary wise based on previous billings									
	4.3	The system should have provision for monitoring and management of LC level beneficiaries wise									
	5	Dash Boards									
	5.1	The system should have provision for graphical representation of various billing / realization data Aging of debtors also required. May be added beneficiary wise realization Rs./kwh									
	5.2	The system should have provision for management of different documents in xls/pdf/docs in the system .Loading, viewing/modification facilities on a periodic basis									
	5.3	The system should have provision for various business intelligence reports based on billing and realization as well as synch data from power exchanges.									
	5.4	The system should have provision for tariff reports and top performers type reports. Like top 5 lowers tariff stations, top 5 best realization beneficiaries									
C		Operations									
	1	The system should have the ability to capture / modify the operations performance data (actual / target) on daily basis & at required level (unit/stage/station) related to Generation, Outage, Aux power, DM Water / Fuel consumption, lines export / import etc. with the applicable checks & logics and store it in a central data warehouse with ability to manage for further use (MIS requirement etc.).									
	2	The system should have the ability to track the creation / modification to the operational performance data as per point "1" above and generate an audit trail									
	3	The system should have the ability to capture / modify the chemical analysis data for the desired parameters for water /fuel, air, lube oil, Ash etc. at required frequency & at required level (equipment/ unit/ stage/ station) along with the master data (upper / lower limits) and capability to validate analysis data with respect to the related master data & store it in a central data warehouse with ability to manage for further use									
	4	The system should have the ability to create & update the action point related to different Operation reviews and audits (point 5 to 8 nos). (Action points to be raised as tasks (short as well as long descriptions provision) for desired area / sub area with responsibility center, planned start / finish dates. Ability to close the task after work completion									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	5	The system should have the ability to track the tasks (as per point 4 above) for different reviews and audits through action taken reports indicating the current status of the tasks e.g. in process, completed, outstanding as per the supplied logics									
	6	The system should have the ability to capture fuel consumption data at unit level on daily basis with related reasons for consumption as per applicability									
	7	The system should have the ability to generate different operational performance reports for day/month/quarter/year/user defined interval/day wise in the required format for company, station, stage, unit level containing raw as well as derived parameters (calculated from raw params with the supplied formulae & desired aggregation across hierarchy) with ability for hierarchical viewing, adhoc analysis with standard reporting tool features (sorting, filter, layout management, graphical representation, simple aggregations, facility to export to external platforms such as spreadsheet etc.). MIS examples: Daily plant performance flash report, Generation loss report, Best performance report, fuel consumption report etc									
	8	The system should have the ability to generate different chemical analysis reports for desired periods in the required format for company, station, stage, unit level containing raw as well as derived parameters (derived from raw params with the supplied formulae) with adhoc analysis with standard reporting tool features (sorting, filter, layout management, graphical representation, simple aggregations, facility to export to external platforms such as spreadsheet etc.)									
	9	The system should have the ability to store, classify, process sequentially with status setting options and retrieve as per desired selection criteria the documents related to different operation processes such as Trip report / Energy Audit / Tech Audit /technical compliance /operation procedures & emergency instructions									
	10	The system should have the ability to receive / send selected data as per defined schedule from / to other data historians / platforms & merging received data with the transactional data captured in the system for further use as per requirement									
	11	The system should have the ability to collaborate / share & store files required for Operation reviews from physically separate locations									
	12	The system should have the ability to supply operation data to management dashboards as per applicability in the desired form									
	13	The system should have the provision for role based access & authorizations for all transactions for different levels									
	14	The System Should have to provision of alarms for critical equipment changeover schedule on the basis of equipment running hours/recommended on-off schedule.									
	15	System should have the provision for generating FIR against any major Tripping/Breakdown and same shall be capable for record "Root Cause Analysis" and recommendation. The provision should have to be there for recommendation tracking.									
	16	System Should have the provision for recording major equipment running hours for proper preventive and Overhaul maintenance monitoring.									
D	1	Project and Plant Maintenance									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.1	Ability to reschedule all related preventive maintenance jobs based on feedback from the Predictive Diagnostic Maintenance group and condition based monitoring (CBM). (For example, a preventive maintenance job planned 15 days hence may be rescheduled along with related jobs based on feedback from the Predictive Diagnostic Maintenance group that there is no current abnormality in the machine									
	1.2	The system should have the ability for Preventive maintenance work orders to be generated with all but not limited to the following parameters : - time since last (e.g. 60 days since last) - equipment running hours (e.g. every 100 hours) - fixed frequency for individual equipment. (e.g. every week) - certain days of the week? (e.g. Every Monday & Thursday) - season (e.g. winter, summer)									
	1.3	The system should have a provision for including or excluding the Higher frequency & low frequency preventive maintenance job at the planning stage									
	1.4	There should be option for skipping certain schedules in bulk, for the area which is not in operation or under shut down for more than certain period.									
	1.5	Maintenance resource availability to be mapped across all work orders. Given a set of active work orders, ability to identify & consolidate work order specific resource requirement in the maintenance plan. Resource requirements include but are not limited to: - Individual maintenance tasks - Manpower (Skill sets and number of staff required) - Material (Spare parts and consumables) - Special tools - Contractor services required - Special services - Standard safety guidelines									
	1.6	The system should have the ability to calculate an estimate of the cost of a work order based on all resources pertaining to the work order.									
	1.7	Cost and resource utilisation for similar types of work orders be available centrally to develop trends.(Trends are used to measure effectiveness and efficiency of maintenance jobs)									
	1.8	Ability to define parent child relationships between equipment and used to identify opportunity maintenance jobs.(If parent equipment item is shut down due to break down and this opportunity is used for maintenance of the child equipment item (s) then this is called opportunity maintenance.) If a parent equipment/ system has gone under shut down for a long period, its child equipments' planned schedules shall automatically be rescheduled to a further specified date or skipped for the duration of the shutdown of parent equipment.									
	1.9	Ability to create work orders without going through the work order planning process by an end user ,override such as for dealing with emergency situations.									
	1.10	Support for shift management including but not limited to: - Rotation staff between shifts - Provision for absences									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.11	Ability to sequence proposed maintenance jobs based on user defined criteria such as resource constraints, priority etc.									
	1.12	Ability to track and monitor Statutory Test, Fitness Test and License status of equipment like Boiler, Pressure vessels, lifting tackles, electrical equipment, explosives and hazardous items (acids, chlorine,hydrogen etc.) and generating alerts for their updation before a user defined period.									
	1.13	Ability to monitor requisitions for spares / work contracts vs administrative approvals / orders placed									
	1.14	Ability to provide various comparisons based graphical representation for present and previous maintenance work.									
	1.15	System should have facility to maintain the details of civil works, infrastructure related to colonies, rest houses and roads etc.									
	1.16	Ability to link a Work Order to a financial account code.									
	1.17	The ability to approve work orders on-line via workflow is required. This could be performed by different incumbents within the organization, depending on work order size/cost, priority, mode and Delegated Financial Authority levels etc. If a work order is not approved within a specified time it should be forwarded to the next appropriate person.									
	1.18	Ability to check whether there are any current warranties on the equipment, on 'related' equipment. This will require a link to the equipment database where all warranty information will be kept									
	1.19	Ability to notify relevant personnel or issue a warning/alarm, if a Work Order has not been completed after certain period of time.									
	1.20	Ability to record the return of materials that were issued against the work order, but they were then not used.									
	1.21	Ability to record the fact that the work has been delayed due to the materials not being available in time. This will be used to evaluate the material planning procedures.									
	1.22	Ability to flag/warning work orders where the work order cost exceeds the work estimate / budget for the month/year or user defined approval limit.									
	1.23	Ability to close the work order partially subject to the approval of competent authority.									
	1.24	Ability to archive Work Orders after a defined period of time. It should be possible to easily retrieve archived Work Orders promptly.									
	1.25	Ability to maintain the parts list contained in the equipment. The list should also include the quantities of parts involved.									
	1.26	Ability to maintain history of changes to Part List. From time to time equipment is reconfigured with alternative parts. History of such changes is required to be kept.									
	2	Work Requisitions									
	2.1	Ability to create, maintain and review work requisitions and delete them if they are not required.									
	2.2	Ability to raise maintenance Work requisitions after receiving feedback from operations about faults. The Work requisitions should be capable of auctioning/ triggering electronic notification to the maintenance engineers									
	2.3	Supports unlimited number of equipment locations for grouping equipment based on geographical, functional or planning attributes and attaching to the cost centers									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	2.4	Facility to look-up spares from spares structure of equipment									
	2.5	Facility to copy tasks with material and resource requirements to the work order from standard procedures Facility to attach notes, equipment drawings / documents, standard operating guidelines for each task in a work order									
	2.6	Option to convert maintenance requests to work orders automatically on approval									
	2.7	Ability to custom friendly review / search for equipment related Work requisitions and/or any other Work Request problem e.g. graphical, Colloquial searches for equipment IDs, drop down menus for selectable fields and sizeable descriptive fields for recording job/fault information.									
	2.8	Ability to classify Work requisitions / Work Order by user defined variables. For example safety, modification, new work, rework, breakdown, preventive etc. It should be possible to report by each of these classifications.									
	2.9	Provision to search for spare parts using multiple search criteria such as warehouse, equipment-wise, vendor, qualitative and quantitative items attributes and their values									
	2.10	Facility for automatic reservation of parts on scheduling the work order and tag the same to MM module									
	2.11	Ability to assign a priority among work requisitions.									
	2.12	Ability to view details of any outstanding Work Requisitions on a specific job or related piece of equipment in order to avoid duplicating work requisitions.									
	2.13	Ability to record the status of a Work requisitions via user defined variables e.g. Awaiting approval etc.									
	2.14	Ability to inform requestor via e-mail or otherwise upon approval / rejection of Work requisitions.									
	2.15	Ability to automatically and manually create / link Work Orders to a Work request.									
	2.16	Ability to transfer (manually or automatically) information captured within a Work Request directly into a Work Order fields e.g. Job Type/ Class type based on application in the organization . Once entered in the Work Order, it should be possible to alter this information e.g. fault description. Ability to include the actual work carried out (additional activities or reduced activities based on actual site conditions).									
	2.17	Ability to establish targets against a Work Request. These targets could be time, financial and/or quality based. The ability to report on these targets should also exist.									
	2.18	Ability to define critical dates against a Work Request. e.g. Required By date.									
	2.19	Ability to approve, maintain, complete and close Work Request.									
	2.20	Provision to allocate standard costs to each type of resource for cost tracking Facility to define types of attendance for employees like normal time, over time etc. Provision to change costs of resource at work order level without affecting the standard cost									
	2.21	Reschedule work orders based on re-forecast availability of spares Facility for raising of Purchase requests.									
	3	Work orders									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
			S - Standard	C - Customization/Configuration	TP - Third-Party Solution	NS - Not Supported / No Solution					
	3.1	Ability to create a work order for all types of work by estimating the job duration, resource requirements, material requirements, contractor requirements and allocate a work priority. The work order shall also identify the labor type and/or crew (s) allocated to the work, description of the work and the duration of the work. It is likely that for Emergency work, the Work Order details could be provided via an electronic interface email / SMS.									
	3.2	The Work Order reference number should accommodate existing numbering and naming conventions used.									
	3.3	Ability to link a Work Order to a financial account code.									
	3.4	Ability to define critical dates against a Work Order e.g. Required By date, planned start date, planned end date, job duration etc.									
	3.5	The Work Order details should include but not be limited to: • Work Order type (e.g. corrective, preventive, breakdown etc.) • Sub categories within a Work Order type • Detailed description • Work Order tasks • Planned start/end date and duration for work • Asset object requiring attention (e.g. equipment, function, location) • Work instructions/tasks • Any safety procedures • Material (spare parts, stock and non-stock items) required • Estimation of manpower (internal and external labor) requirement • Labor skill level • Work permit • Planned cost • Cost centre/project code etc.									
	3.6	Ability to link/reference a Work Order against a piece or group of equipment or location.									
	3.7	Ability to create multiple Work Order tasks against a Work Order.									
	3.8	Ability to define work requirements (plan/ labor/ equipment/tools/spares/ other) against the Work Order.									
	3.9	Ability to assign and review Work Order priorities.									
	3.10	Ability to postpone Work Orders to a certain date or to a specific shutdown period.									
	3.11	Ability to make changes to a Work Order (e.g. change maintenance steps, change material requirements, change labor requirements).									
	3.12	Ability to view details of any outstanding Work Orders on specific or related pieces of equipment.									
	3.13	Ability to record the status of a Work Order via user defined variables e.g. on stand-by awaiting materials, partially closed, closed etc.									
	3.14	Ability to generate Work Orders based on maintenance triggers. Work Orders for Preventive Maintenance tasks may be generated in the following ways :- • Automatically • Automatically requiring approval / authorization • Manually									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	3.15	The ability to approve work orders on-line via workflow is required. This could be performed by different incumbents within the organization, depending on work order size/cost, priority, mode and Delegated Financial Authority levels etc. If a work order is not approved within a specified time it should be forwarded to the next appropriate person.									
	3.16	Ability to maintain, complete and close Work Orders online.									
	3.17	Ability to adjust all elements of the Work Order including : • Materials • Resources • Tools • Timings									
	3.18	Ability to group the task based on the nature of work like • Capex Investment • Non Capex work									
	3.19	Ability to create and issue an emergency Work Order that does not require approval. An audit trail will record the user who authorized the Work Order.									
	3.20	Ability to view all permits issued/outstanding on a equipment/asset.									
	3.21	Ability to review maintenance history for a specific item of equipment and/or on a particular manufacturer based on Work Order history.									
	3.22	Ability to attach documents to a Work Order including detailed work instructions, safety requirements and checklists, drawings etc. Upon issue of a Work Order, it should be optional as to whether attachments are printed automatically or at the discretion of the user.									
	3.23	Ability to review and print any technical information associated with the work.									
	3.24	Ability to check whether there are any current warranties on the equipment, on 'related' equipment. This will require a link to the equipment database where all warranty information will be kept.									
	3.25	Ability to specifically target a group of Work Orders during a search - based on Work Order fields populated by the user.									
	3.26	Ability to notify relevant personnel or issue a warning/alarm, if a Work Order has not been completed after certain period of time.									
	3.27	Ability to generate a requisition of permit in order to isolate equipment for maintenance.									
	3.28	Ability to identify all permits issued/outstanding in relation to a particular piece of equipment or groups of equipment.									
	3.29	Once work has been scheduled requisitions are automatically raised for materials and contractors. (Manually function should be able to overwrite the automatic function.) These requisitions should not require additional approval i.e. Once the work order is approved all related business objects should be considered as approved.									
	3.30	Ability to send a purchase request to procurment /material department if needed (This requisition to be raised after viewing the availabilty of material on line)									
	3.31	Ability to generate alerts to higher officials/Procurement function for pending approval /consent.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	3.32	Provision to fabricate new items or recondition defective items and give back to stores using stock orders									
	3.33	Ability to dispatch work to crews automatically (Manually function should be able to overwrite the automatic function.) based on user defined criteria.									
	3.34	Ability to create, maintain historic records and delete Work Orders. Update maintenance history of equipment on completion of work order.									
	3.35	Ability to generate batch of work orders instantly based on certain day, week, month etc.									
	3.36	Ability that work order can be generated automatically by existing preventive maintenance generated work order.									
	3.37	Ability to update scheduled date of work order completion based on availability of equipment and other resources.									
	4	Work Completion Report									
	4.1	Ability to record the maintenance history data against a component/equipment that has had a work order raised against it. It should be possible to make this field mandatory i.e. A job cannot be closed unless this field has been entered. The same may be fed to individual equipment history also.									
	4.2	Ability to capture all information relating to completed maintenance work against a work order as part of the maintenance history database. Retain the information as part of the maintenance history unless it is physically removed from the system (e.g. through archiving exercise).									
	4.3	Ability to record the return of materials that were issued against the work order, but they were then not used.									
	4.4	Selectively flag off tasks as completed during the course of work order execution									
	4.5	Ability to record the fact that the work has been delayed due to the materials not being available in time. This will be used to evaluate the material planning procedures.									
	4.6	Ability to record the fact that the work has been delayed due to insufficient labor resources. This will be used to evaluate the scheduling procedures.									
	4.7	Ability to record the fact that the work has been delayed due to Lack of permit issue or any other user definable fields.									
	4.8	Ability to bulk close similar Work Orders meeting a user defined time, cost, resource, status or other criteria.									
	4.9	Ability to close Work Orders automatically once the last Work Order Task (including all previous tasks) has been completed.									
	4.10	Ability to allow authorized employees to enter text in a free format against the Work Order. These comments should be able to be forwarded to concerned authority.									
	4.11	Ability to flag/warning work orders where the work order cost exceeds the work estimate / budget for the month/year or user defined approval limit.									
	4.12	Ability to automatically flag outstanding orders/costs when attempting to close a Work Order.									
	4.13	Ability to close the work order partially subject to the approval of competent authority.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	4.14	Ability to completely close off work order. System should inform user that all outstanding commitments and invoices have been met. After this step, no more costs can be charged to the order. The system must fetch & update equipment history based on completed work order as a part of documentation.									
	4.15	Ability to archive Work Orders after a defined period of time. It should be possible to easily retrieve archived Work Orders promptly.									
	4.16	Any associated time based or usage-based triggers should be reset if the related work has been completed. "Completion" should be user defined e.g. Partially closed Work Order									
	4.17	Work orders can be technically closed when all details like actual duration hours, Material, spares used, miscellaneous costs, actual cause for failure etc. have been captured Work orders can be financially closed after all payments and accounting entries have been passed. Facility to track the technical and financial closure details of all work orders. It is required to display estimated v/s actual cost including breakup as labor cost, material, tool & Services.									
	5	Maintain Bill of material									
	5.1	Ability to maintain the parts list contained in the equipment. The list should also include the quantities of parts involved.									
	5.2	Ability to maintain history of changes to Part List. From time to time equipment is reconfigured with alternative parts. History of such changes is required to be kept.									
	5.3	Ability to maintain reference to catalogue. For each part in the equipment parts list, there is a requirement to include a cross reference to the catalogue, to enable material identification and reservations.									
	5.4	Ability to maintain the document identification and document contents in the document register. Ability to maintain any links between documents and any Equipment/ Component items.									
	5.5	Ability to maintain the drawing identification and drawing contents in the drawing register. Ability to maintain any links between drawings and any Equipment/ Component items. It also desirable to have the ability to markup/red line drawings on the users screen and email the changes to an officer responsible for updating the document.									
	5.6	When an equipment item / component is created, it is required to reference the item / component to an asset in the fixed assets register. Where a relevant asset hasn't been set up, it is expected that the system would require the creation of an appropriate asset.									
	6	Analyze and Report Plant performance									
	6.1	Filtering of worst performing equipment based on Number of failures, Trend in failures, Maintenance costs, Highest percentage corrective maintenance, based on loss of generation etc.									
	6.2	Ability to display the maintenance costs for a range of equipment/ components. This will enable the user to review all costs incurred during the life of an asset including labor, materials, contractors costs etc.									
	6.3	Ability to report common equipment failures and repair times based on fault codes.									
	6.4	Ability to review any notes about the particular equipment/ component, which have been entered by maintenance experts. The notes should be accessed from the particular equipment/ component record.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	6.5	Ability to analyze and report the mean time between failure (MTBF) or an item of equipment. It should be able to be summarized for any particular equipment or a group of equipment. In addition, the 'time between failure' should be able to be replaced by usage statistics between failure.									
	6.6	Ability to analyze and report the mean time to repair (MTTR) for an item of equipment. This involves calculating the average of the work order duration's for an item of equipment. Alternatively, it could be an average of the recorded downtimes.									
	6.7	Ability to report how many times an item of equipment has failed within nominated time periods (Frequency of Failure) along with ability to reset the same after attending the fault.									
	6.8	Ability to determine from the historical data the probability of failure over a set time period along with the filters to classify the reasons of failure									
	6.9	Ability to display the reason of failure of an equipment / component which will help to determine the criticality of the equipment / component.									
	6.10	Ability to produce statistics linking the cause of failure and the effects of the failure.									
	6.11	Perform Pareto analysis of the maintenance cost distribution across equipment within a location									
	6.12	Graphically review the cost (total cost, resource or material costs) trend for an equipment across various time periods Track maintenance costs for an equipment for various types of work orders and different cost elements such as contract resource, employee resource, standard parts, nonstandard parts, miscellaneous costs, inspection costs etc. Facility to view cost break up between the main equipment and its child.									
	6.13	Ability to assist in the reviewing equipment/component age, maintenance history, and recommended working life to determine if it will be able to meet the requirements of the operations/ maintenance departments.									
	6.14	Ability to assist in the decision to retain an item in its current state, replace the item, or modify it based on future usage, estimated maintenance costs, average downtime etc.									
	6.15	Ability to review maintenance work performed on equipment and highlight regularly occurring defects in specific types/designs of equipment. The report should be able to be run based on user defined parameters such as equipment ID, make / model, defect code etc.									
	6.16	Ability to review the history of spares and consumable usage and reflect the same to planning of spares and consumables.									
	6.17	System should facilitate to group tasks which require similar inspection tools and generate a single checklist									
	6.18	System should facilitate to create inspection checklist for multiple equipments along with route plan for inspection									
	6.19	System should able to review status of equipment which have abnormal parameter values and trigger mails to the concerned officials for their respective action to be taken									
	6.20	System should able to maintain the history of parameter inspection to satisfy statutory requirements									
	7	Cost Control									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	7.1	Ability to cost internal maintenance work hours to the work parcel. The value should be a multiple of the hours and a predefined standard charge rate.									
	7.2	Ability to cost contractor hours to the work parcel. The charge rate should be contained in an established agreement with the contractor. It shall also have ability to record other contractor charges, such as overheads, costs of using contractor owned equipment, or costs of using contractor materials etc.									
	7.3	Upon receipt of contractors invoice it should be possible to reconcile hours against those appearing on the Work order.									
	7.4	Ability to record all costs towards materials/spares etc. against a work Order									
	7.5	Ability to cost equipment, plant and tools to Work Orders based on hourly rates.									
	7.6	Ability to allow the recording of actual worked hours on an on-line timesheet. It should be possible to enter the timesheet data by individual employee, work group, work crew or by Work Order.									
	7.7	Ability to interface with financial system via the referencing/linking of the Work Order to an account code. There should be an option to link all transactions booked to the Work Order to a transaction file for examinations of costs and dates of incurrence.									
	7.8	Ability to validate entered timesheet data including : • Employees (validate against crews and individuals scheduled to the work); • Work Order no (validate against Work Order no and status e.g. closed for actual)									
	7.9	Ability to forward, through Work Flow, the input timesheet to the appropriate approving officer for certification.									
	7.10	Ability to allow for manual keying in of Work Order expenses.									
	7.11	Ability to allocate (manually and/or automatic; individually and/or in bulk) cost to different Work Orders and asset types (e.g. contractor fees).									
	7.12	Ability to drill down from Work Order or job to individual cost transactions.									
	7.13	Ability to show Work Order actual costs versus budget and forecast. Provides for Actual vs. Budgeted expense analysis for an equipment / location / period									
	7.14	Ability to generate an alarm when Work Order expenses reach a user defined limit.									
	7.15	Ability to view (on-line) cost information for the purpose of checking and monitoring progress.									
	7.16	Capable of performing checks to ensure that cost can only be transferred based on approved criteria (e.g. that the job to which the cost is to be transferred to is a valid job).									
	7.17	Ability to prevent cost transfers against closed jobs.									
	7.18	Ability to establish security measures to control the transfer of costs.									
	8	Workshop jobs									
	8.1	Ability to use maintenance work order to generate a corresponding job order for the workshop / testing lab for select equipment / spares.									
	8.2	Ability to track cumulative job orders to determine machine shop utilization and the job orders status.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	9	Execute job									
	9.1	Ability to track status of a Work Order through various stages in its life cycle from creation to closure.									
	9.2	Ability to generate and report the actual maintenance costs of spare parts, contract, duration of work, man power, etc . This is required at varying levels of rollout including: - For a Work Order - Equipment / Item of equipment - Equipment groups - Sub-system - System - Power generating unit - The power station									
	9.3	Ability to record user defined information against each work order. (For example, equipment name, job description, job duration, PTW details etc)									
	9.4	Ability to combine active Work Orders with other Work Orders pertaining to, shutdown jobs, replacement of equipment etc. (This is to avoid duplicating effort)									
	9.5	Ability to track all chargeable, non-chargeable and returnable material issued to contractors as per their respective contracts. All materials planned in a work order, may not be required for every job. There should be provision for selecting only those materials as required for the particular job									
	9.6	Ability to attach supplementary information to Work Orders in standard formats including MS Office, AutoCAD, Multimedia etc. These attachments are used to assist maintain a history of the Work Order									
	9.7	Ability to prepare and access lubrication jobs as per the lubrication schedule by the lubrication group.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	9.8	Ability to enter and store details regarding the lubricants used for each lubrication job for future References. The system should be able to record material and services in the job card issued against work-order. Ability to record the details of the scrap generated in any maintenance or work-orders. This shall be linked to the assets register. A planned work order should have provision for recording any abnormal condition found and/ or any additional work done during a planned maintenance The maintenance history, including the defects, causes, action taken, costs incurred and time duration shall be available in a single report and the same shall be traceable upto the top-most system in the hierarchy of the equipment. There shall be provision in the work orders so that no data could be deleted after the actual execution of work starts. However, if some addition is to be done, as for some additional work, that can be included. Although in case of some exigencies, the provision to delete selected data from the order under execution, shall be possible by some admin level authorizations									
	10	Safety Requirement – Permit to Work									
	10.1	A work specification must include all the following sets of information (but not limited to): - Individual maintenance tasks to be undertaken - Manpower (Skill sets, number of staff required and duration) - Material (Spare parts and consumables) - Special tools - Contractor services required - Special services (consisting of in-house or outsourced services) - Standard safety guidelines including requirement of PTW (Also, provide details of any additional information provided)									
	10.2	The system should have the provision to create and maintain centrally master list of safety instructions / isolations / precautions requirement									
	10.3	The system should have the provision of reporting a defect, where required isolations for Permit to Work (PTW) and precautions for jobs to be undertaken, be selected from respective user defined list									
	10.4	The system should have the ability to user defined PTWs be including but not limited to the following types: - Permit for Work - Limited Work Certificate - Sanction for Test - PTW with Restoration of Motive Power - Hot Work Permit With a provision to make default any one or any combination of above permit types, with specified equipments/ systems and tasks									
	10.5	The system should have the ability to generate PTWs per equipment and for a block of equipment									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	10.6	The systems should have the provision for generating safety isolations and safety instructions that are to be sourced from work instructions, and are further be incorporated in the PTW									
	10.7	The system should have the additional safety instructions to be incorporated into the PTW									
	10.8	The system should have the ability to track the status of PTWs									
	10.9	The systems should have the ability for a user defined PTW lifecycle to be defined This needs to encompass the individual steps, their sequencing and the authorisation rules for each step									
	10.10	The system should have the ability for PTWs to be printed and the printing of same should be subject to standard printing controls such as control over the printing of duplicates, unique numbering etc									
	10.11	The systems should have the ability for a Work Order to be issued based on user defined business rules without requiring a PTW . For example, a minor maintenance job that has no safety implications.									
	10.12	Provision to block changes in certain specified fields in Work Order after issuance of permit should be available									
	10.13	Provision to extend the validity of PTWs based on a specific request with reasons from the Maintenance should be available. The record of such extension to also be maintained in system									
	10.14	Provision for temporary normalization of system, for trial run of equipment under permit, after maintenance job is over should be available in the system. The event when maintenance surrenders permit for trial must also be recorded in the system									
	10.15	Simple provision to record additional safety instructions; padlock key details used by Operation, in the permit should be available in the system.									
	10.16	Provision to capture details of such isolating objects in the isolation lists/ standard lists, which have not been made as functional location or equipments.									
	11	Unit Overhauling – Planning & Monitoring as Project									
	11.1	Provision to plan and monitor the process of a unit overhauling as a project - Provision to have a Work Breakdown Structure - Provision to define activities with duration - Provision of linking these activities as successors & predecessors & their scheduling - Monitoring progress of these activities – daily progress report - Alerts when any activity is delayed - Provision to tag milestone activities - Monitoring of critical paths - Incorporation of PERT & CPM - Graphical representation of progress – GANT Chart, S-curve etc.									
	11.2	Provision of standardizing the list of activities based on grouping of similar units									
	11.3	Provision of copying existing Projects/ WBS/ Activities into new project.									
	12	MIS Reports									
	12.1	The maintenance history should be available along with information about the next due maintenance.									
	12.2	Information as regards consumption/stock of materials and services should be available as a prerequisite for preparing maintenance budget.									
	12.3	Provision of failure report with causes, tasks etc. relevant to equipment breakdown.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	12.4	User defined information for a Maintenance Order(MO) like equipment name, job description/duration, work permit details etc., should be provided.									
	12.5	The estimated cost of materials/services utilized in a maintenance order should be available department wise and also based on order type i.e., preventive/corrective/overhaul etc.									
	12.6	Reports regarding various order statuses should be available right from creation to closure.									
	12.7	Provision for tracking various statuses of Work Permit should be in place along with the relevant sets of isolations, time stamp of each status along with the user name who sets that status.									
	12.8	Information pertaining to comparison of equipment maintenance cost and cost of replacement of same for formulating replacement policy.									
	12.9	Reports depicting variations of actual vs. planned maintenance activities in terms of user defined parameters.									
	12.10	Comprehensive user defined reports should be defined covering all maintenance information including but not limited to: • Percentage of preventive maintenance. • Percentage of total breakdowns. • Percentage of predictive maintenance. • Percentage of proactive maintenance. • Mean time between failure (MTBF) • Mean time to repair (MTTR)									
E		Project Systems									
	1	Project Planning									
	1.1	System should track administrative and technical approvals for survey & investigation works									
	1.2	System should maintain a sequence of works as defined and being carried out under Survey & Investigation and should track them									
	1.3	System should be able to fetch historical data activity wise from the repository into word or excel formats for analysis and budgetary proposals									
	1.4	System should have application formats required for various statutory and non-statutory requirements									
	1.5	System should support preparation of budgetary proposals									
	1.6	System should support revisions and updations in budgetary proposals									
	1.7	System should have various guidelines for Environment Impact Assessment and should have required report formats									
	1.8	Based on the government guidelines and project profile; System should be able to develop a broad level implementation schedule.									
	1.9	Ability to record land acquisitions/routing clearances and support for template based formats for different clearances									
	1.10	Ability to generate status report on land acquisition for projects underway									
	1.11	Ability to capture the timelines for clearances, approval and the reason for delay if any									
	1.12	Ability to record environmental assessment and surveys undertaken for all the projects									
	1.13	Ability to maintain the environmental status at different stages of projects related to equipment, space etc.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.14	Should support assessment of resources, material and manpower, based on project planning									
	1.15	Ability to create project profile - Name, type, capacity, mode of funding, project cost center, location, beneficiaries, work background structure, major milestones, technical details, financial details, and broad timelines etc.,									
	1.16	Project Initiation by competent authority and communicating about it to all the participating members									
	1.17	Planning Support - Ability to create planning support repository which will consist of documents related to standard templates of resources, risk & effective mitigation strategies, learning from other projects, other historical data etc.,									
	2	Project Execution and Tracking									
	2.1	Support for auto-generation and manual-generation of project codes, and preserve uniqueness									
	2.2	Ability to support alpha-numeric characters for project codes									
	2.3	Ability to update physical and financial progress of the project									
	2.4	Ability to track completion of each module/activity, leading to the overall commissioning of project									
	2.5	Ability to track every component and equipment contained in a drawing/document & bill of material of a package from manufacturing, inspection at vendor premises and also till receipt at work site location									
	2.6	Ability to generate alerts for slippages at all levels (post and anticipatory) with ability to record reasons attributable to owner/contractor									
	2.7	Ability to monitor all projects at consolidated, individual or task level									
	2.8	Ability to list all works/projects being carried out during quarterly/year along with the fund required. Further the ability to store the following: • Data of the spill over works/projects from previous year(s) to be completed during the quarter/year • Data of all the new works/projects to be carried out during the quarter/year. • Data of all the new works/projects to be started during the quarter/year which will over to next quarter/year									
	2.9	Ability to monitor projects resource wise, timeline wise, department wise and funding agency wise									
	2.10	System should have the availability to give comparison between project cost estimates and availability of funds									
	2.11	Ability to monitor estimates versus actual : Fund, services, labour, time span, vehicles used, etc.									
	2.12	Comprehensive project database to capture the data pertaining to all aspects of projects									
	2.13	Ability to enter measurement sheets in desired format capturing the data from package wise repository									
	2.14	Ability to enter RA bills and system to trigger alerts for milestone based billing									
	2.15	Ability to access the various drawings/documents, quality plans, specifications etc in various formats like MS office, PDF, VISIO, CAD associated with certain package of the project.									
	2.16	Ability of system to check for the compliance to quality plans of vendor's deliverables and also record the inspection report along with issuance of compliance certificate to vendor									
	2.17	Ability to record & track approval of quality deviations from vendors									
	2.18	Ability of system to reconcile the quality checks and update them with quality plans									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	2.19	Ability to record & track approval of quantity deviations from engineering department									
	3	Scheduling of activities									
	3.1	Ability to generate network diagram automatically from the following inputs: • Broad implementation schedule • Package lists • Activity relationships • Other inputs required to a network diagram									
	3.2	Ability to integrate with Primavera/MS projects for scheduling of activities (WBS) till L3/L4 level									
	3.3	Ability of system to support multiple work break down structures, indication of critical path, & lead-lag									
	3.4	Ability to support multiple work breakdown structures such as project, package, module & activity wise									
	3.5	Ability to revise the schedule including splitting, stretching and crashing of activities									
	3.6	Ability to load Master network and L2/L3 schedules from legacy systems									
	3.7	Ability to define milestone based on activities..									
	3.8	Ability to create version of the snapshots of project at different times of execution. relationships, etc. to be shown.									
	3.9	System should provide prediction of milestone and/or project completion, based on activities,									
	3.10	Ability to provide actual vs planned schedules									
	3.11	Ability to generate urgent activities list in daily report.									
	4	Creation of Project Structures & WBS									
	4.1	The system should have the provision to create the Project structure with unique project code and work breakdown structure detailing the hierarchy of the project.									
	4.2	The system should have all the standard project management features.									
	4.3	WBS should be able to collect cost made through Purchase Orders, etc.									
	5	Resource tracking across projects									
	5.1	Provide a central tracking system that enables project teams to record, assign, & resolve issues and capture related risks pertaining to project.									
	5.2	Ability to maintain project percentage completed status - based on work to date.									
	5.3	Ability to highlight and correct errors, if detected in project management with proper notifications and authorization controls									
	5.4	Ability to calculate schedule parameter uncertainty, perform probabilistic schedule risk analysis, probabilistic cost risk analysis, risk simulations, risk analysis reports									
	5.5	Support for attachments such as drawings, specs, instructions etc., in formats such as PDF, CAD, Visio, text/flat files, PPT, XLS, DOC, RTF, TIF, GIF, JPEG etc.,									
	5.6	Ability to generate Gantt charts, histograms, tables, charts etc.,									
	6	Linking with Master Drawing List & Drawing Display for Projects									
	6.1	The system should have the provision for linking the engineering drawings available in DMS with activities/network.									
	7	Budget & Cost Planning									
	7.1	The system should have the features for providing budgeting and cost planning									
	7.2	Ability to record and update total planned cost estimates based on Annual / Five year plan									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	7.3	Ability to create project-wise and department wise cost estimates for various projects/sub-modules									
	7.4	Ability to record project resource requirement estimates									
	7.5	Ability to display a project total/accumulated costs in terms of actual revenue, capitalization costs, future commitments etc									
	7.6	Ability to revise project cost estimates post approval and approval for each revision									
	7.7	Control mechanism to track changes made to the cost estimates after project funding approvals									
	7.8	Ability to support multi approval levels for projects									
	7.9	Ability to allow project control mechanism to be delegated									
	7.10	Ability to display the projects to be approved									
	8	Monitoring Reports									
	8.1	Ability to generate and support template based information needs of the management but not limited to capturing all the project management activities for the entire cycle of construction projects i.e. from the point of proposal of a new project to final testing & commissioning of the project									
	8.2	Data on any project must be kept throughout the life of a project.									
	8.3	Ability to generate report on all the projects being carried out during the year.									
	8.4	Ability to generate report on all the projects held up due to fund/resource constraints in an year									
	8.5	Ability to generate report on all projects delayed during an year, along with the reasons for the delay									
	8.6	Support for template based project progress reports to be submitted to different funding agencies.									
	8.7	Ability to generate template based project progress status reports on a timely basis (Monthly, Quarterly, Half-yearly, Annually etc) for management review project wise / project unit wise									
	8.8	Ability to print project reports at summary level and detailed level and report the compiled status of all the projects under execution in the year									
	8.9	Ability to provide security measures, to ensure that the project closure is done by authorized personnel only									
	8.10	Ability to generate project completion reports, both physical and financial.									
	8.11	The system should have the provision for generating milestone based progress report									
	8.12	The system should have the provision to generate daily progress reports along with constraints.									
	8.13	The system should have the Financial figures with respect to unique G/L codes, capital expenditure, budgets, etc.									
	8.14	The system should provide comparison of actual and planned costs/schedules									
	9	Project Accounting									
	9.1	Ability to record information on payment terms, milestones, etc									
	9.2	Ability to store / record invoice from vendors									
	9.3	Ability to integrate with Regional store to view real time information on status of delivery of materials against unique project codes									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	9.4	Ability to review completeness / correctness of invoice with respect to payment terms, value, approved variations (price/quantity) if any, progress certification etc. and certify completion of milestone									
	9.5	Ability to approve invoice and send information to Corporate Finance for payments (hierarchy based approval) and RAO if any									
	9.6	Ability to integrate with Finance and Accounts to view real time information on status of payments against unique project codes and invoice number									
	9.7	Ability to maintain payment records for the duration of the project against unique project codes									
	9.8	Ability to upload invoices and other related documents such as inspection reports, job completion certificate against work order and submission for approval									
	9.9	Ability to check requisite documents, verify rates- material, erection works, material used etc									
	9.10	Ability to record progress of the works in defined Measurement Book (MB)									
	9.11	Ability to create provision for signature of competent authority for approval of the MB									
	9.12	Ability to approve MB by competent authority (first level, second level approval etc)									
	9.13	Ability to calculate penalty amount by the concerned department as per tender conditions and automatically integrated to F&A									
	9.14	Ability to record justification for extension of project timeline or any other reason and approval from competent authority									
	9.15	Ability to recalculate penalty amount and integrate for release of payment									
	9.16	Ability to approve the bills by the competent authority of the execution department									
	9.17	Ability to integrate with RAO for authentication and subsequent approval of bills by the competent authority									
	9.18	Ability to transfer data from Capital Work in Progress to completed capital works									
	9.19	Ability to transfer data relating to completed capital works to the Fixed Assets									
	9.20	Ability to support workflow related to direct purchasing of goods and services (purchase orders; goods received notes etc)									
	9.21	Ability to calculate value of the asset as per the price variation costs etc									
	9.22	Ability to generate No liability certificate									
	10	Asset capitalization									
	10.1	Ability to automatically integrate an asset with the General Ledger, Accounts Payable, Accounts Receivable, Project Management and Budget of the financial system through an unique account code									
	10.2	Ability to display detailed description about the account code assigned to the asset or equipment to the concerned Official									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	10.3	Ability to allow manual keying in of minor project expenses like transport, petty cash, etc									
	10.4	Ability to drill down costs from projects to source transactions									
	10.5	Ability to break down project cost by resource type									
	10.6	Ability to track project expenditures and compare it against the budget allocations									
	10.7	Ability to raise a trigger if the actual expenditure has exceeded budgeted allocation									
	10.8	Ability to list the total cost incurred due to usage of owner's equipment or tools during work									
	10.9	Ability to list the total cost incurred due to work performed by a Contractor									
	10.10	Ability to approve the work performed by the Contractor by the concerned official before final payment by the finance department									
	10.11	Ability to capture cost expenditure against an asset including procurement, erection, maintenance and other activities									
	10.12	Ability to track costs / expenditures against an individual asset or a defined group of assets									
	10.13	Ability to roll all work order costs to the proper asset and project									
	10.14	Ability to maintain cost history project wise									
	10.15	Ability to transfer final costs to general ledger only on project completion certification.									
	10.16	Ability to index project cost codes to relevant general ledger account.									
	10.17	Ability to track project expenditures- capturing information from execution departments/ contractors and compare it against the budget allocations									
	10.18	Ability to approve the work performed by the Contractor by the concerned Official before payment of dues to them by the finance department									
	10.19	Ability to capture cost expenditure against an asset during the life cycle from procurement to commissioning and while in service till date									
	10.20	Ability to track costs / expenditures against an individual asset or a defined group of assets									
	10.21	Ability to generate report related to availability of various items in field offices, execution departments etc for execution of project									
	10.22	Linear Asset Management- "The proposed ERP product should provide standard functionality for these assets as per best practices and should be open for customization to meet Client's business requirements if not addressed through standard functionality."									
F		Quality Management									
	1	Corporate awarded packages : Engineering and Quality documents review, commenting and approval process									
	1.1	System should have the ability to have a web interface to the external user for submission of drawings / documents and for viewing the status of the submission made									
	1.2	System should have the provision of detailed MIS report available to the vendor along with the status log									
	1.3	System should have the ability to link the documents to the MIS reports									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.4	Work flow for Document reviewed and comments given by reviewers / approver									
	1.5	Ability to segregate the documents based on the doc type and attribute / characteristics provided by the user such as: 1. Quality Plan Document (attributes such as plant; QP category etc.) 2. Vendor Drawing / Document 3. In-house drawing / docs 4. Technical Specs etc.									
	1.6	System to have restricted users access for making changes in this documents submitted									
	1.7	System to allow freezing of one documents submitted as the final docs based on the documents status									
	1.8	Ability to search the documents based on the search criteria such as : • Document Name • Date of Submission • Document Type • User Name • Department etc.									
	1.9	Ability to verify the deduplication / inconsistency of data and to verify the mandatory field and generate an alarm to the vendor and JV's.									
	1.10	Ability to cross verify if the mandatory field available on WEB interface are properly stored on the database									
	1.11	Different type of MIS Reports that can be created using the data stored (not more than 15 types); display/ print, save on system and achieve									
	2	Quality Inspection process : based on approved Purchase Order									
	2.1	Ability to link the relevant documents with Purchase requisition / PO									
	2.2	Ability to select / enter vendor code and inspection category item-wise based on the inspection relevant requirements during creation of Purchase Order, and generate alert to all the concern users (email / message)									
	2.3	Ability for Preparation & approval of Quality Information record : sub vendors wise, material item wise for a plant, for supply /services									
	3	Maintenance of Vendor classification for RIO allocation									
	4	Maintenance of Inspection RIOs for Materials where inspection is required									
	5	Authorization keys management for each Inspection Engineer									
	6	Inspection call entry by vendor for Purchase order ON web PORTAL									
	7	Inspection call planning									
	8	Issuance of CHP (Customer Hold Point)									
	9	Issuance of MDCC (Material Dispatch Clearance Certificate)									
	10	Inspection activity related to different type of MIS Reports that can be created using the data stored (not more than 15 types)									
	11	Role based access and authorization to the Users									
G		Sales Distribution									
	1	Centralized Customer Maintenance for Sales Activity									
	1.1	The system should have single window provision for maintaining Customer details and Sales view for materials and customers along with Finance integration									
	2	Scrap Sales									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	2.1	The system should have provision for capturing Sale Award and Contract and subsequent sales order									
	2.2	The system should have provision for Stock maintenance, Delivery Orders , Gate Pass, Challan, Billing and MIS report									
	3	Ash Sale / Cenosphere sales									
	3.1	The system should have provision for capturing Sale Award and Contract and subsequent sales order									
	3.2	The system should have provision for Stock maintenance, Delivery Orders , Gate Pass, Challan, Billing and MIS report									
	4	Ash Bricks Sales									
	4.1	The system should have provision for Ash Brick stock keeping and Sales process									
	5	External Consultancy services									
	5.1	The system should have provision for Awarding of consultancy jobs and corresponding billing & accounting activities									
	6	Rent Recovery /Construction Equipment Hire									
	6.1	The system should have provision for Rent recovery from residential and commercial entities									
	7	R&D and Lab Testing assignments									
	7.1	The system should have provision for Awarding and billing & accounting activities									
	8	Bilateral Power Trading									
	8.1	The system should have provision for maintaining Power Sale and Purchase activities for multiple beneficiary									
	8.2	The system should have provision for generating reports pertaining to Sale and purchase of Energy for multiple beneficiary									
	9	External Training services									
	9.1	The system should have the provision of external training services and billing & accounting activities									
	10	G-Form Data									
	10.1	The system should have provision for maintaining Energy Cess and duty payable amount on Power Sale and Purchase activities Separate for beneficiary and Aux. consumption units									
H		Fuel Management									
	1	General									
	1.1	The system should have provision for keeping record of all Fuel Supply Agreements (FSAs) including additional notifications /agreements									
	1.2	The system should have provision to show status of payments to be made and claims raised to the suppliers. It should automatically generate required notifications to concerned persons for follow-up in case of delay or discrepancy									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.3	The system should have provision for Creation & Maintenance of Master data: a. Daily CRIS data for RR and wagons (received through web service from Railways and integrated in ERP) b. Mines' data – mapping of coal companies and their mines c. Mapping of JV's Plant to Railway siding d. STC (surface transport charges) e. GCV code and calorific value range mapping f. Price keys – Mapping of coal company, GCV, coal type, various kinds of charges (basic charge, royalty, crushing charges, etc.), taxes, environment cess, applicable date range, etc. g. SI to consider all the parameters required for Master Data in consultation with Jhabua Power Ltd. & JV's h. All minor modification required have to take care by SI at no extra cost to Jhabua Power Ltd. / JV's									
	2	Coal Verification									
	2.1	System shall have capability to capture the details of physical verification of coal including temporarily blocking coal inventory movements, date & time of verification, name of verifying officials, details of discrepancies (if any) and other similar details.									
	2.2	System shall: • Generate Physical Verification Report (PVR). • Generate Discrepancy report based on PVR and actual coal stock in each yard / whole plant • Generate Monthly summary on coal movement • Forward Monthly summary automatically to CTD, RAO, CHP Ops, HO, other officers for information									
	2.3	The reports shall also be forwarded to competent authority for approval of discrepancies AND if approved, record the approval details and adjust the Coal Stock Register accordingly.									
	2.4	The system should the capacity to record the coal analysis report									
	3	Coal Accounting									
	3.1	System shall automatically generate mode wise / mine wise valuation CRR. System shall also generate purchase journal voucher (PJV).									
	3.2	System shall generate Bill payment voucher (BPV), Transfer voucher, and coal bill payment report for payments made based on valuation CRR, bills from suppliers, bills for sale of electricity to supplier, adhoc payment made to supplier. System shall also generate various other journal vouchers (JVs), debit /credit notes, as per processes of Jhabua Power Ltd. - JVs, for accounting and books of account purposes.									
	3.3	System shall generate Monthly coal Valuation sheet and calculate weighted average cost of coal based on valuation CRR, daily / monthly coal consumption quantity report, coal related expenses, quantity for stones / shales, etc.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	3.4	Based on monthly coal valuation sheet and average cost of coal: System shall determine the following: • Value of carpet coal and accounting thereof • Value of normal & abnormal losses and accounting thereof • Value of Coal stock and accounting thereof • Value of coal in transit and accounting thereof • Value of coal losses in transit and accounting thereof									
	3.5	System shall calculate and make available reports for coal consumption, normal & abnormal losses, coal stock and coal losses, coal in transit as per processes followed by Jhabua Power Ltd. / JVs									
	3.6	System shall generate a claim on Railways for wagons diverted out based on Rail CRR & Match Delivery statement and prepare relevant JVs for reversal of payment to railway									
	3.7	System shall calculate the demurrages charges payable to Railway with provision of indication & penal charges separately and prepare demurrages report indicating the reasons for delay based on Rake siding coal register, placement memo & release memo and compare the same with bill for demurrages from Railway. System shall prepare the payment voucher (BPV), JV for liability towards Railway and recoverable from unloading contractor, if demurrages are attributable to unloading contractor									
	3.8	System shall generate transporter wise freight payable containing the mine wise, date wise, truck wise coal quantity transported, deductions to be made for losses based on the freight rate agreement, Fuel Supply Agreement with coal supplier, etc.									
	3.9	System shall generate RR wise freight charges payable to Railways in Rail Coal Freight report based on freight agreement, Rail placement memo, recoverable etc, necessary payment vouchers, JVs, etc. System shall also generate debit note on coal supplier for under loading / over loading									
	3.10	Reconciliation of e-freight account of railways & railway account as per basis of : • Actual wagon • Diversion of wagon • Prepaid payment • Mismatch item									
	4	Receipt of coal through railway wagons									
	4.1	For receipt of coal through Railways rack, System should capture and maintain at unloading end, rack no, date, siding / mine name, no of wagons, wagon no, grade of coal in each wagon, gross / tare weight of wagon, net weight of coal, carrying capacity of wagon, speed at which wagons passed, arrival time, free time, release time, total time, time delayed, reason for delay etc.									
	4.2	System shall have necessary provisions to capture the data from In-motion weighbridges of Jhabua Power Ltd. on real time basis and indicate transit losses per wagon/rake wise									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	4.3	System should generate - Rake siding coal register, placement memo & release memo - Rail coal weighment slip and alert in case of any abnormality such as speed of wagon during weighment is outside permissible limit. - System shall also record the details of railway rakes / wagons diverted In / Out in Rail coal weighment slip and forward same to CTD & also missing wagons. - An alert if the rakes have not been unloaded before a predefined time period. - Rail Coal Receipt Register rake wise / mine wise / coal grade wise including details of weighment at loading / unloading end, losses, railway rakes / wagons diverted In / Out etc and forward same to RAO & coal sampling wing automatically. - System shall match the wagons / rakes diverted in / out with each other and generate a Match Delivery Statement and forward it to CTD & RAO. - Update the Coal stock register for each yard mine wise / coal grade wise.									
	5	Receipt of imported coal									
	5.1	The system should have provision to define coal of various qualities in the system based on: • Ash Percentage • Rated fuel content • Sulphur content • Moisture Content The system should have the provision to capture the vessel details									
	5.2	The system should have provision to define basic data for transportation of imported coal receipts, accounting, payment status, such as: • Define tare weight and volume of each container. • Create freight locations and attach them to different supplier addresses. • Attach freight location to plant address. These freight locations should get defaulted at the purchase order for coal/fuel with an option to change them at the PO level									
	5.3	The system should have provision to define freight contracts (rates) with a freight forwarder (shipping line) for freight charges between any combinations of freight locations. The options for defining freight charges should be: • Weight Based • Volume Based • Container Based									
	5.4	System should maintain logistics agreement with freight forwarders for transferring coal from port of loading to Indian Ports including ship berthing size and dredging, ship unloading arrangements, port charges (customs and clearing agents), warehouse agreements with ports, transporting coal from Indian ports to plants by Railways / truck transporters.									
	5.5	System shall integrate with shipping line system and generate rake requisition automatically.									
	6	Receipt of Washed Coal									
	6.1	System should have provision to define parameters of washed coal: • Ash % (Yield determination) • Actual quality is dependent on yield percentage • Un lifted quantity will be charged to penalty & shall be required for reconciliation with Coal Mine Company.									
	7	Coal Consumption									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	7.1	System should record the readings (Weightometer reading of the conveyor belt or Gravimetric Coal Feeders) feeding the coal into the coal bunker every hour to calculate the quantity of the coal consumed (net of recycled coal taken to coal yard) shiftwise / day wise and generate Coal Consumption Quantity Report (CCQR) on daily / monthly basis for each power house with GCV of coal as fired									
	7.2	System should be able to generate comparison reports for GCV, Ash Content, Moisture, Volatile Matter, Surface Moisture, of received coal on a monthly/yearly basis mine wise / transporter wise.									
	8	Freight Payment Reports									
	8.1	System should have flexibility to incorporate all types of freight agreement e.g. freight paid basis, freight to pay basis. The system should have a list of approved freight payment and delivery conditions. Addition / deletion / modification of freight and delivery conditions should be allowed with requisite approval									
	8.2	System should have a list of all past and current Freight Payment schemes and delivery conditions for Railways along with version controls									
	8.3	System should maintain a database of Powerhouse Siding as mentioned in freight payment schemes									
	8.4	Issuance of Railways Receipts (RR) in accordance with agreement should be monitored and ensured by system.									
	8.5	System should maintain a database of all past and current RRs which are to be accessible through search and report options									
	8.6	System should maintain a database of Under loading, Overloading, late charges paid to Railways along with the explanatory note from concerned officer									
	8.7	System should maintain a database for free time allowed by railways									
	8.8	System should monitor payment of demurrage charges to railways and reports / exception reports / alerts should be made available									
	8.9	System should be capable of raising and tracking claims in case of diversion of rakes or excess freight payment									
	8.10	System should support payment of freight electronically i.e. e-payment system.									
	9	Weighing Systems Report									
	9.1	System should be capable to generate the calibration check schedule as per predefined periodicity									
	9.2	Detailed calibration report should be prepared containing variation in weight measured compared to standard weight, percentage of variation, steps taken for improving the accuracy level of the system, special comments of calibrator, etc									
	10	Monitoring Coal Losses									
	10.1	<u>Transit Losses:</u> • System should be capable of capturing the weight of consignment at loading and unloading point, rake weight, along with time and date, etc. System should be capable of generating Annual/Monthly/Daily transit losses plant wise / mine wise / transporter wise. • System should have a capability to raise an exception alert in case transit loss exceeds norms defines by JV's.									
	10.2	<u>Moisture Losses:</u> Moisture losses shall be calculated by System as per user defined formulae and time interval and in case moisture loss exceeds norms defined by JV's, an alert should be generated to concerned official for information and further action.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	10.3	<u>Wind age Losses:</u> Wind age losses shall be calculated by System as per user defined formulae and time interval and in case wind age loss exceeds norms defined by JV's, an alert should be generated to concerned official for information and further action									
	10.4	<u>Other Losses:</u> System should maintain losses due to flooding, spontaneous combustion, pilferage, Handling and stacking etc. These details should be made available in the desired format as and when desired by authorized users for information and further action									
	10.5	<u>Carpet Coal Assessment:</u> System should maintain records, past and present, on carpet coal assessment. These details should be made available in the desired format as and when desired by authorized users for information and further action									
	10.6	<u>Stones/ Shales Register:</u> • System should maintain a database, tracking date, truck no., gross weight, tare weight, net weight, and time, weighing authority and transport authority representative • All these parameters should also be posted in daily coal report • System should be capable to monitor record of stone / shell assessed by a joint committee of coal company and JV's as per terms Fuel Supply agreement.									
	11	Coal Stock Management									
	11.1	System should have capability to generate report on stock of coal required on normative basis as defined by									
	11.2	System should use the conventional inventory models for assessing quantity of coal stock required and same should be made available to authorized users as and when sought by them									
	12	Secondary Oil Management									
	12.1	System should maintain all past and current details on opening, receipt, consumption, and closing balance of secondary oil (LDO, HFO, HSD etc.) on user defined periods for each of the plants									
	12.2	All withdrawals and additions to secondary oil (LDO, HFO, HSD etc.) stock are to be recorded in ledger database									
	12.3	The ledger should also contain quantity of secondary fuel used for each unit / plant / whole company as per user defined period (daily/ monthly/ yearly) and provide consumption report in the format desired by users.									
	12.4	System should compare the secondary fuel used in each unit & plant with respect to norms defined by Jhabua Power Ltd. / JV and if consumption is more than set limit, an alert should be generated to concerned officials for information and action									
	12.5	System shall generate alert if the consumption figures of secondary oil (LDO, HFO, HSD etc.) of SE (Opn) and store ledgers does not match.									
	13	Payment to Agencies									
	13.1	System shall generate Liaisoning Agent wise charges payable containing the power plant wise, mine wise, date wise, qty of coal quantity transported, deductions to be made for losses based on the agreement, etc.									
	13.2	System shall generate agency wise amount payables for agencies involved in liaisoning, sampling & unloading of coal, stone / shell picking, stone / shell loading, misc. other works based on the agreements with respective agencies.									
	13.3	System should be able to maintain payment terms of washed coal; which is totally dependent upon the yield percentage of that particular supply of coal.									
	14	Reports									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module	Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
		System shall generate following reports as per the format prescribed by JV								
	14.1	Receipt								
		Weightometer Coal Report								
		Conveyor Belt Coal Receipt Report								
		Truck Weighbridge Coal Report								
		Truck Coal Receipt Report								
		Rail Coal Weighment Slip								
		Rail Coal Receipt Report								
	14.2	Consumption								
		Coal Consumption Quantity Report								
	14.3	Valuation								
		Valuation CRR								
		Monthly Coal Valuation Sheet								
	14.4	Claims								
		Coal Debit Note/ Credit Note Form								
		Match Delivery Statement								
	14.5	Materialization								
		% materialization against ACQ (Annual Contract Quantity)								
		Quantity lifted against ACQ								
	15	System shall generate following MIS reports								
		• Daily Coal Report (DCR)								
		• Monthly Coal Physical Verification Report								
		• Month Wise/ Mine Wise Coal Receipt Summary								
		• Monthly Coal Receipt Analysis Report – Grade/ UHV/ Quantity/ Cost								
		• Month Wise/ Power House wise Coal Consumption Summary								
		• Monthly and Cumulative Summary of Coal Movement								
		• Monthly Report on Weighing Instrument								
		• Reports on Transit handling losses								
		• Demurrage losses								
		• Stone/shale accounting								
		• Imported coal use/blending etc;								
	15.1	Registers								
		System shall maintain following Registers								
	15.2	Receipt								
		Rake Siding Coal Register								
		Stone / Shale Quantity Register								
		Register on Railway Wagons / Rakes Diverted in / out								
	15.3	Consumption								
		Coal Consumption Register								
		Mill Reject Register								
	15.4	Valuation								
		Coal Bill Register – Final Bills								
		Coal Bill Register – Provisional Bill								
		Valuation CRR Register								
	15.5	Claims								
		Coal Debit/ Credit Note Register								
	15.6	Coal Stock								

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
		Daily Coal Stock Register									
		Yard/ Location wise Coal Stock Register									
	15.7	Freight									
		Truck Coal Freight Payment Control Register									
		Rail Coal Freight Register									
I		Material Management (MM)									
	1	Unification and allotment of codes for material, vendors, services									
	1.1	The system should have provision for unification and allotment of codes for material, vendors and services									
	2	Purchase Requisition (PR)									
	2.1	The system should have provision for preparation & approval of Purchase requisition for goods									
	2.2	The system should have provision for preparation & approval of Purchase requisition for services									
	2.3	The system should have provision for release strategy of purchase requisition									
	2.4	The system should have provision for closing of individual and group purchase requisition(s)									
	2.5	The system should have provision for requisition for Automatic replenishment Items									
	3	Bidding & Related Process									
	3.1	The system should have provision for RFQ preparation, approval ,release strategy									
	3.2	The system should have provision for Bid Amendment & Bid Opening ,Retendering, & Quotation maintenance & creation of various condition types for pricing procedures									
	3.3	The system should have provision for preparation of comparative statements									
	3.4	The system should have provision for preparation of purchase proposals or Tender Committee (TC) recommendation ,negotiations and approvals									
	3.5	The system should have provision for preparation and release of Letter of Intent (LOI), Draft and Final Purchase Order (PO) / Letter of Award (LOA)									
	3.6	The system should have compatibility of web based e-procurement									
	4	e-Tendering Process									
	4.1	Solution should be able to integrate with e-Tender Portal of the Govt. (GEM) / Client's choice.									
	4.2	System should have all the standard formats, guidelines and terms and condition of tenders									
	4.3	System should generate tender document on the click of a button from available template and forms information held within. System should also support generation of tender document offline using desktop office tools									
	4.4	System shall define the hierarchy for approval of Tender so generated and forward the document and record their comments with time stamp. System should also support digital signing of the comments									
	4.5	Upon approval, system shall generate final tender doc, get it signed digitally by appropriate authority and forward the documents along with tender calendar, base attributes, etc. to e-tender system for uploading to portal.									
	4.6	Ability to modify Bid/Tender document and resubmit for approval									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	4.7	Ability to hold a Bid/Tender document awaiting authorization and generate alert of Bid/Tender document awaiting approval									
	4.8	Ability to track and record the status of a Bid/Tender document e.g. not approved, approved									
	4.9	Ability to reject the tender during authorization, record the reason for rejection and return to the indenter through the workflow									
	4.10	NIT publication on the web along with basic attributes and tender calendar									
	4.11	Communication of availability of tender document through e-mails to respective registered suppliers									
	4.12	Pre Bid Conference in a completely online real time conference where multiple buyer officials and vendors can conduct conversations in real time. All inputs from buyers as well vendors are to be visible to everyone participating in the conference.									
	4.13	Issue of corrigendum such as postponement of schedule dates, change in technical specs, quantities, special or general conditions, change in bid or bid item forms provided bid closing for the corresponding round not started, addition of extra bidding rounds (Revised Bids) and envelopes and bid forms, addition and deletion of items in the tender									
	4.14	System shall support online Supplier Registration including:- • Basic Registration: Basic registration includes allotment of a user ID and Company ID to each vendor through online after submission of desired information in form. Registration approval can be automatic or at buyers discretion. • Request for empanelment: vendors to fill up buyer- defined forms and upload supporting attachments and submit empanelment requests for items and services listed for empanelment as per vendor's choice. • Empanelment Renewal / Up gradation: Vendors can submit renewal requests online before or after expiry date. Vendors can also put in online requests for empanelment for additional items and / or services. • Vendor Information Update: Vendor information can be updated as and when required by vendors online. The changes may be subject to buyer approval. • Update of Digital Certificate: Since digital certificates are valid for a limited period, the certificates need to be updated from time to time. This can be done online by vendors. • Assisted Registration: This is for those vendors that do not have access to the Internet. A designated buyer officer acting on these vendors' behalf can register them. • System should generate reports of registered vendors on different parameters such as item category, turnover, Govt. supplier/NTPC supplier etc. • System should enable to e-mail the tender notices to all the registered vendors									
	4.15	System should be able to identify all vendors, who are not blacklisted or has back track record, for items to be purchased.									
	4.16	System shall have ability to provide the list of alternate suppliers for each item.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	4.17	System shall have following inbuilt security features:- • Security - No unauthorized person has access to data, - All sensitive and confidential data is to be encrypted • Audit Trail - All the activities, transactions and changes in configuration are to be logged. - Log to be made available of activities at the database level thereby ensuring that a robust audit trail is always available of all the activities either at the application level or the database level. • Data Encryption - The login passwords of all the users and the suppliers are to be encrypted at the database level. • Secure Administrator Access - To prevent an administrator from misusing his access privileges, the system shall have dual level password verification before allowing an administrator access to the admin module. --- The first password is to be provided by the administrator himself and the second password is to be provided by some designated senior person within the buying organization. -The administrator shall be authenticated on advanced technologies using biometrics. • Process Validation • Secured Socket Layer (SSL) Certificate: - The solution would use SSL Certificate for communication between the browser and the web server to ensure that all the data is encrypted and cannot be hacked/misused by anyone									
	4.18	Ability to support workflow related to waiver of EMD, penalty, material inspection									
	4.19	Ability to evaluate vendors based on multiple parameters like quality of material, quantity of material and adherence to delivery schedule, prices quoted by the vendor, vendor response time, performance in other utilities and other user defined parameters									
	4.20	Ability to perform technical-commercial and financial evaluation in consultation with finance department. (Through Manual Intervention)									
	4.21	Ability to perform best fit Bidder analysis based on user defined parameters (support workflow for Bid/Tender document response evaluation, selection and approval) (Through Manual Intervention)									
	4.22	Ability to generate reports like percentage rise in cost of the item in the present bid/ bids over previous purchase history (Through Manual Intervention)									
	4.23	Ability to seeking approval from competent authority for opening of price bid.									
	4.24	Ability to update status for approval to award contract (Through Manual Intervention)									
	4.25	Ability to record change in statutory taxes as per Union budget and subsequent implication									
	4.26	System should be able to give a cost comparison among the bids received as required by the user. (Through template provided in the system)									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	4.27	System should provide comparison of rates for same items procured in the past by HQ or other plants (Through template provided in the system)									
	4.28	System should keep track of status of tender such as issued, under process with mile stones (technical opening, commercial opening, under approval from management), tender awarded. (Through template provided in the system)									
	5	Outline Agreement- Contracts preparation & approval									
	5.1	Rate Contract feature for award of rate contract by JV company should be available in the system									
	6	Purchase Order & Work Execution									
	6.1	The system should have provision such that Purchase order can be issued for the rate contract, quotations, PR or without any reference document									
	6.2	The system should have provision for all international currency in import PO									
	6.3	The system should have provision for release strategy of PO by Materials and Finance									
	6.4	The system should have provision for deviation handling in material and service PO									
	6.5	The system should have provision for execution of services for measurement of works									
	6.6	The system should have provision for advance Payment									
	7	Procurement & Ordering									
	7.1	Ability of system to store work & procurement policies, guidelines, circulars & the delegation of powers and should be accessed centrally									
	7.2	Ability to create pre-tendering schedule (timeline for NIT, pre bid, bid opening and bid evaluation)									
	7.3	System should be able to maintain package lists centrally for future reference									
	7.4	Ability of system to create a draft package lists by copying earlier package lists for a similar project centrally									
	7.5	Ability of system to access the package wise cost estimates developed earlier by the department centrally									
	7.6	Ability of system to access the qualifying requirements per package developed by the department centrally									
	7.7	Ability of system to access the technical requirements per package developed by engineering department centrally									
	7.8	Ability of system to produce on demand the template for bid documents maintained centrally.									
	7.9	Ability of system to store centrally the commercial documents such as General Conditions of the Contract (GCC), Special Conditions of Contract (SCC), Erection Conditions of Contract (ECC), General Technical Requirements (GTR), Health, Safety and Environmental (HSE) Specifications, amendment to bid documents, Notice Inviting Tender (NIT), Bid forms and Proposal Sheets (BPS).									
	7.10	Ability of system to prepare comprehensive set of bid documents automatically by applying defined business rules and various templates based on the specifications for various packages of project.									
	7.11	Ability of system to provide access to finance & engineering departments for vetting techno-commercial documents as per DOP									
	7.12	Ability of system to track the changes/amendments									
	7.13	Ability to identify prospective vendors from the repository based on the scope per package in the bid document.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	7.14	Ability of system to record centrally past deviations and their resolutions by bidders in a user defined structure for future decisions making									
	7.15	System should have ability to record the pre-bid discussions held during Pre-bid conference and record the necessary amendments to be made.									
	7.16	System should be able to amend bid documents and keep track of the versions and approvals of the same from competent authority as per delegation of powers									
	7.17	Ability of system to check the high level compliance to given qualifying requirement and initial response of the prospective bidders.									
	7.18	Ability of system to generate Bid opening statement with details of quoted prices, EMD and conditions to contract etc and provide access to only authorized persons									
	7.19	Ability of system to maintain checklist of items for verification of BG's as per circulars									
	7.20	Should be able to support load factors at the stage of tendering in case of deviations are more than expected from the bidders									
	7.21	Ability of system to develop evaluation model based on business rules including internal cost estimates for calculation of variance									
	7.22	Ability of system to generate an comprehensive output from the evaluation model considering inputs from commercial evaluations by projects team and technical evaluations by engineering department									
	7.23	Ability of system to trigger approvals for the evaluations based on delegation of powers									
	7.24	Ability of system to track bid validity dates for various bids and take necessary actions if extensions are required									
	7.25	Ability of system to record pre-award discussions and approvals of the same from competent authority as per delegation of powers.									
	7.26	System should be able to initiate the re-tendering process with respect to original tender if necessitated.									
	7.27	System should support template in preparation of Letter of Intent/Letter of award based on inputs from bid documents, evaluation model as well as manual inputs									
	7.28	System should provide user defined status like 'Draft' & 'Final' for the Letter of Intent/Letter of Award									
	7.29	Ability of system to include the following prerequisites in the format of Letter of Intent/Letter of Award: • Acknowledgement • Locking of document • Versioning • Audit trail of changes									
	7.30	Ability of system to trigger approvals for issuance of Letter of Intent/Letter of award as per user defined workflow									
	7.31	Should be able to track the status of procurement and ordering for all the projects.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	8	Analysis of purchase effectiveness									
	8.1	The system should have provision for total time assessment / Lead time analysis, from PR to Purchase Order releases									
	8.2	The system should have provision for auto escalation matrix									
	9	Tax Code Maintenance									
	9.1	The system should have provision for Tax code maintenance									
	10	Creation & Modification of payment terms									
	10.1	The system should have provision for Creation & Modification of payment terms									
	11	STORE									
	11.1	The system should have provision of maintaining storage location for moment of goods between various stores of same plant									
	11.2	The system should have provision for movement of Goods & Stock among plants of same JV									
	11.3	The system should have provision for Warehouse (BIN Location) management by the authorized team of JV company									
	11.4	The system should have the provision for handling of rejection, discrepancies / shortage, material inward slip (MIS), Goods receipt & acceptance of goods and inbound delivery									
	11.5	The system should have provision for good issue and return									
	11.6	The system should have provision for reservation (issue) of Stock against procurement									
	11.7	The system should have provision for accountability of fuel allocation to the employees (Diesel & Petrol) and should also have provision of limitation									
	11.8	The system should have provision for management of Vendor managed Inventory in stores									
	11.9	The system should have provision for Physical Stock verification									
	11.10	The system should have provision for generation of MIS reports									
	11.11	The system should generate alerts to the user department about receipt of material through SMS / Email									
	11.12	The system should have provision for batch management for capturing at-least 10 fields									
	11.13	The system should have provision for Scrap, Obsolescence & Surplus disposal & accounting									
	11.14	The system should have provision for accounting of free of cost material issued to contractors									
	11.15	The system should have provision for accounting of loaned material issued to contractors									
	12	Goods Received Management									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	12.1	Ability to pre-populate (pop-up) the screen the following details upon entering the purchase order number:- • Bill of material • item code • quantity ordered • make & model of each item • price and its basis • delivery schedule • payment terms for each item • payment methodology, • warranty period									
	12.2	Ability to record the Receipt of material information in the form of Return Indent / RR /MTR / Transfer voucher									
	12.3	Ability to enter the RR / MTR / TV against a particular invoice / Challan.									
	12.4	Ability to record verification of material received against Purchase Order / Release order									
	12.5	Ability to record goods received against the purchase order in DRR and highlights any variation in quantity received.									
	12.6	Ability to generate and maintain Daily material received details (DRR report). Inspection note shall be reflected automatically in the DRR.									
	12.7	Goods received details to be automatically transferred to the Accounts Payable system for payment after approval from the concerned authorities as soon as stores acknowledge the receipt of goods in good condition.									
	12.8	Ability to Record receipt adjustment entries w.r.t. previous entries but with appropriate authorization									
	12.9	Ability to record the material overheads, the costs other than the cost of material like transportation, local body tax, GST, Entry TAX, insurance, Demurrage or Wharf age Charges etc. should be booked under the cost of material									
	12.10	System should capture and calculate the time period for which the rejected material is lying at the store site. After 6 months that material should automatically move for auction.									
	12.11	Ability to store verification / quality inspection details for an item in the system and subsequent generation of the inspection note After goods receipt, System should issue alerts for inspection calls and reminders to concerned official automatically for inspection / verification of material and insurance claims									
	12.12	Facility to track record for expiry date tracking at the time of goods receipt. The system to disallow / allow receipt with warning based on user defined parameters. Stock status of stock on hand with expiry dates automatically changes to 'Hold'on Expiry									
	12.13	Ability to record the details of the rejected material in Register of Rejected Material (RRM) and generate rejection note addressed to the vendor with a copy to order placing authority for further pursuance									
	12.14	Ability to generate / issue Goods received note (GRN) & MRC for accepted/rejected/excess/surplus material against the purchase order number, Release Order No., Return Indent No., Verification Report No In case of Cash purchases of material the acceptance field should be available in the system.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	12.15	Ability to provide status of goods received into the system as received but not ready for distribution (i.e., awaiting quality control or serial numbering etc.)									
	12.16	System to have standardized formats for capturing inspection details for each categories of items/materials. System should enforce certain mandatory details to be captured as per the item category									
	12.17	Facility to intimate the order placing authority regarding the status of excess/ short-supply of materials/ goods.									
	12.18	Ability to monitor status of: • Pending cases of inspection of material • Pending cases of MRC • Pending cases of GRN • Pending cases of rejected materials and its follow up action by the order placing authority • Pending insurance claims, lodging of new claims and its follow-up • Pending advance payment account balances and its clearance • Ability to monitor the status of surplus supply									
	12.19	Ability to Record positive/negative quantities and values in GRN. System should be able to allow tolerance limit of quantity for GRN entry									
	12.20	Ability to Part receipt of the ordered quantity of material but only after authorization									
	12.21	Ability to link an item with other items, even if they are supplied by different vendors									
	12.22	Ability to track materials damaged during handling/transit during diversion cases and this shortfall should be adjusted in the inventory									
	12.23	Ability to reject a consignment receipt and still enter the details into the system to enable tracking and vendor performance to be captured									
	12.24	System should have control mechanism for 3 way or 4 way match									
	13	Process for Commercial Lease									
	13.1	The system should have provision for Lease management									
	14	Bank guarantee (BG), Import & Export procedures(T & CC), Letter of credit									
	14.1	The system should have provision for Creation of Bank guarantee (BG), Letter of credit in MM & its approval by FI									
	14.2	The system should have provision for tagging different forms / road permits etc.(as part of Order release)									
	15	Contract closing									
	15.1	The system should have provision for contract closing (No dues certificate)									
	16	Accounting of returnable / non-refundable material issued against Gate pass									
	16.1	The system should have provision for linking of Gate Pass to the moment of inventory / asset. Gate pass can be tagged with / without changing the stock									
	17	EMD/Tender fee/SD/PBG & EMD refund									
	17.1	The system should have provision to submit appropriate EMD/SD/PBG/Standing EMD/ Tender Fee/Exemption of EMD/EMD & SD refund. Provision should also be there for conversion from EMD to SD and generation of MIS report									
	18	Creation & maintenance of Scheduling Line agreement									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	18.1	The system should have provision for creation of scheduling agreement with vendor									
	19	Price Variation (PV) process									
	19.1	The system should have facility to handle variable prices in purchase orders based on price variation condition such as PV indices and PV formula etc.									
	20	Record and evaluate the vendor's performance									
	20.1	The system should have ability to evaluate the performance of vendor based on various parameters									
	21	Bill tracking system									
	21.1	The system should facilitate the vendor to track the bills raised by him, till receipt of payment									
	22	Risk management(Insurance policy)									
	22.1	The system should have provision for integrating with warehouse movement and gate pass issuance									
	22.2	The system should have provision for transit insurance & asset insurance with claim management									
	23	Package Creation									
	23.1	The system should have capability to create package & its operation process for new/expansion/ Renovation and Modernization project activities.									
	24	Master Data Management Including Approvals - Vendor, Customer and Asset									
	24.1	Vendor Master Data									
	i	The system should able to record details for each vendor Master: • Name of Vendor • Address- including Mobile No and email Id • Vendor group • payment method, • Payment terms etc. • Tax details- PAN / TAN / TIN / ECC etc. • Bank details • Existing Vendor No									
	ii	Vendor Master should be unique across the company and its plants									
	iii	System should be able to handle different address of the same vendor for invoicing and payment, partner function should be activated.									
	iv	Vendor No. preferably should be system generated, except for some special group of vendor.									
	v	System should able to cater inter unit transaction.									
	vi	Accounts payable should be real time integrated with financial general ledger.									
	vii	Vendor should be integrated as sub ledger with a general ledger. And then transaction should be updated through sub ledger; direct entry to the general ledger should be restricted.									
	viii	System should able book other than normal transaction in separate general ledger as per balance sheet requirement. • Vendor Advance • EMD • Security deposit • Retention money etc.									
	ix	• System should have the provision to define one time vendors • System should have the provision for defining vendor equal to customer as well									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	24.2	Customer Master Data									
	i	Should record details for each customer Master details including • Name of Customer • Address- including Mobile No and email Id • Customer group • Payment method, • Payment terms etc. • Tax details- PAN / TAN / TIN / ECC/ GST, etc. • Bank details									
	ii	Customer Master should be unique across the company.									
	iii	In case of different address of the same Customer, invoicing and payment Customer are different, partner function should be activated. (Ship to party / bill to party).									
	iv	Customer No. preferably should be system generated, except for some special group of Customer.									
	v	Accounts receivable should be real time integrated with financial general ledger.									
	vi	Customer should be integrated as sub ledger with a general ledger. And transaction should be updated to general ledger. Direct entry to the general ledger should be restricted.									
	vii	System should be able book other than normal transactions in separate general ledger as per balance sheet requirement. •Customer Advance •Security deposit •Discounts									
	viii	System should have the provision for defining vendor equal to customer as well									
	24.3	Asset Master Data									
	i	Asset class / group and sub- group should be defined, and one Asset should belong to only one Asset class.									
	ii	Asset master data code should be defined in the system									
	iii	Asset No./ code should be generated through the system									
	iv	Asset No range should be Asset class wise, so that from Asset No. Asset class can be identified.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	v	Asset master Should record details for each Asset. Asset Master details including • Description / name of Asset. • Asset class. • Unit of measurement. • No total unit • Inventory No. • Capitalization date. • Cost center • Business Area • Plant • location • Salvage value • Useful life and remaining useful life. • Depreciation start date • Depreciation keys / rate with validation date – Depreciation area wise. • Change of depreciation key/ rate date. - Depreciation area wise. • Vendor details • Insurance details • Evaluation factors details									
	vi	System should able to generate sub Asset No. based on main asset.									
	vii	System should be able to handle group Asset / block Asset for the purpose of depreciation calculation as per income tax Act.									
	viii	System should allow upload of all legacy Asset including zero value with all details on the cut over date.									
J		Document Management System									
	1	Documents such as - Engineering Drawings, Equipment, Quality inspection and those related to PO and Procurement - should be considerer as a part of the standard SAP DMS scope.									
	1.1	The system should have provision for Document management system that allows storage and retrieval of all the latest circular, notifications from the Central Govt., State Govt., Indian Railways, etc. with version management and search facilities. These documents should be attached with system documents like contracts, purchase orders etc. DMS should store all document, drawings, manuals, circulars, images, etc with proper index and attributes, and should be searched on providing those attributes / indexes, names, periods, etc. Also, these should be attached to relevant documents, etc.									
K		Human Resource & Payroll Management									
		Employee Information & Org. Structure. Details									
	1	Ability to maintain following employee details (but not limited to)									
	1.1	Personal Details e.g. Employee Number, Name (First/Middle/Surname), Employee Photograph (upto 150kb), Date of Birth, Date of Joining (in Company/Power Station/Circle/ Office/Particular department or section or shift- including position, Forenoon/Afternoon status), Date of regularization, Date of Confirmation, gender, marital status, number of children, religion/ category (SC-ST-OBC-UR-Other state), location, department, designation, entry mode, grade, Blood group, Date of demise,etc.									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.2	Family / Dependent Details e.g. father, mother, spouse, children, any other dependent etc.(Dob, Educational Qualification, Martial Status, relation, blood group, photographs, date of demise, Adhar No. etc.)									
	1.3	Address Details e.g. permanent, correspondence, emergency, address after separation etc. including resident from/to details.									
	1.4	State of Domicile									
	1.5	Working time e.g. shift details, off days, holidays with sanction of leave through work flow having functionality for having substitute approver									
	1.6	Disability & type of disability									
	1.7	Employee grade, and Employee Type e.g. Executive/Non-Executive (Supervisor, Workmen) etc.									
	1.8	Employee groups e.g. Trainee, Workmen, Supervisor, executives, BOD, Probationer, Regular, Work Charge, NMR, Contractual, Deputation (Into Company/ Outside Company) Pensioner, etc.									
	1.9	Medical information e.g. Blood group, medical examination details, etc									
	1.10	Salary Grade and level									
	1.11	Details of all Salary components									
	1.12	Cost to Company									
	1.13	Appointing Authority (Among JV's)									
	1.14	Skills & Qualifications (Course, Grade/ percentage/ CGPA, Achievements, area of specialization, year of passing, etc.) linked from recruitment applications.									
	1.15	Education (Education level in increasing order, Institute details, location, Start/End date etc) linked from recruitment applications.									
	1.16	Appraisals & evaluations.									
	1.17	Previous employment details (Industry type, Organization details, Start/End date, Job Title, location, Gross salary, breakup of taxable salary like leave encashment exemption, gratuity exempted perk etc.reason for leaving). designation, etc.) with drop down facility for Industry type, Organisation Type, Name for a given set etc.									
	1.18	Employee Details of working/experience in various division/circle offices obtained during service period in the company (Wing, Area of Specialization/ Branch/Stream).									
	1.19	Cost Center details. This is to be defaulted based on MAPING for location and department code									
	1.2	Contact details e.g. telephone/ mobile number, email id, etc. This to be maintained period wise. Further with time constrain option.									
	1.21	Insurance & Nomination details for various schemes eg NDCPS, Employee pension scheme, PF with % share etc									
	1.22	Personal ID's e.g. PAN, Aadhaar No, Voter ID, Passport, Driving License, photograph etc.									
	1.23	Ability to support both Hindi (mangal font) and English language for letters and report generation.									
	1.24	Training history (Course details, type of training, Institute details, and Start/End date), Competency Mapping- Fields & competency level.									
	1.25	Leave details and quota balances / accrual and pro-rata e.g. EL, CL, HPL, LWP, RH etc. (Medical ground/ non-medical ground).									
	1.26	Time recording information (in-time / out-time). Interface of this system with third party time punching system									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	1.27	Company's Identity Card No., PF, GPF, EPS, UAN Permanent Retirement Account Number (PRAN), ESI Number, Position ID, Superior's Position ID.									
	1.3	Movable & Immovable Property details, Loans									
	1.31	Details of any Service Agreement Bond with the Company, Start/ End Date. With reason code									
	1.32	Details of accommodation (HRA (with rent receipt or without rent receipt, Company owned with category, company leased) availed at posting location and other location, Electricity rebate (if any), Date of vacation of company accommodation on separation.									
	1.33	Ability to store employee actions against order numbers and dates.									
	1.34	Ability to support workflow based approvals for all type of employee related activity.									
	2	Employee Information & Org. Structure. Details Continued..									
	2.1	Ability to store organization structure and reporting hierarchy based Job description (roles& responsibilities) on location, plant, department, sub-department & designation									
	2.2	Ability to maintain employment history and migrate historic data based on data templates									
	2.3	Ability to support role based permission for data access									
	2.4	Should support defining reporting hierarchy for employees to include multilevel reporting or multi disciplinary reporting									
	2.5	Should be possible to capture details of transfer of an employee from one department to another department or location without changes other attributes like employee number									
	2.6	Should allow for maintaining a checklist of details to be mentioned in each employee's personnel file									
	2.7	System should support certain free fields per employee to support capture of additional employee information									
	2.8	Should support creation of organization structure for different functionalities & Location Department and assigning employees to it									
	2.90	Should support maintaining an employee history to include change in assignments, promotions, transfers, pending issues etc.									
	2.10	Should capture details of all training / certification or qualification acquired while on job									
	2.11	Should capture all details of employees working on deputation (into company or outside company) including Organization/ Deptt details, Position held, Start/End date of deputation period, Details of Salary components, Details of deputation order.									
	2.12	Should define multiple designations, post diversions & adjustments.									
	2.13	Should be possible to capture details of new employee added in the company from recruitment details.									
	2.14	Should maintain history to the changes made to the Organization Structure.									
	2.15	Should include updating or modifying the structure with ease through a user-friendly tree like structure.									
	2.16	System should have provision to store order / circular / notification which effected and organizational change for an employee with date of implementation and date of order separately and related reports should be developed									
	2.17	Ability to support integration of positions with manpower planning module to understand staffing requirements									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	2.18	Ability to store designations along with the skills and competencies required for a particular position so as to analyze the redeployment of existing employees									
	2.19	Ability to maintain change in hierarchy levels or designations due to promotions, transfers of employees (Integrate with Promotion Module, Transfer Module)									
	2.20	Ability to restrict making changes in the Org Structure to authorized persons only									
	2.21	Ability to seek confirmation after every change made in the structure, changes to be made permanent only on authentication by the controller of the authorized person — Multi stage process									
	2.22	Ability to change/restore/rollback changes to a previous (given) dates and report inconsistencies									
	2.23	Ability to define administrative powers for organizational units position-wise									
	2.24	Ability to integrate administrative power definitions to work flows and approvals									
	2.25	Facility to project the cost implications of adding new /modify - manpower / Department/Function/Position									
	2.26	Ability to clearly define the hierarchy of Delegation of Power in the organization									
	2.27	Facilitate issuance of office order for an employee on execution of certain actions like promotion , transfer.									
	2.28	Should have checks like on promotion grade code should get upgraded, if promotion is linked with probation the sstem should capture probation data with period.									
	3	Conveyance Advance									
	3.1	The system should have the provision for applying the conveyance advance as per rule of the company									
	3.2	The system should have the provision for linking the conveyance advance to the benefit plan									
	3.3	The system should have the provision for defining the eligibility criteria for applying conveyance advance									
	3.4	The system should have the provision for checking the previous conveyance advance details									
	3.5	The system should have the provision for applying the Conveyance advance though Self-Service by specifying the Benefit Plan. On specifying the Benefit Plan the system should automatically checks for his/her eligibility. System also check the surety details & insurance dates									
	3.6	The system should have the provision for workflow for Application as stated below: Application to be sent to the Recommending officer Recommended application to be sent to HR Officer Once the HR Officer Proposes the Application in the Conveyance Advance Panel, Application should be sent to the Sanctioning Officer									
	3.7	The system should have the provision for sanctioning officer to approve or reject it									
	3.8	The system should have the provision for theHR Officer to generate the Office Order and Payment Advice from the system									
	3.9	The system should have the provision for recovery once the advance made has been made									
	3.10	Should have facility to maintain whether the vehicle has been hypothicated in favour of the company									
	3.11	Provision for making exception in sanction of conveyance advance									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	4	House Building Advance									
	4.1	The system should have a provision for management & administration of Application and Sanction of HBA (as per company rules) related data of all the employees, covering the following: • Setting up of the HBA purpose • Application for Fresh Advance • Application for Subsequent Installment • Application for Enhancement • Application for Deferment • Generation of the Proposal Sheet • Constitution of the Civil Assessment and Inspection Team • Eligibility of the Surety /Change of Surety • Generation of Reports									
	4.2	The system should have a provision for workflow from submission of the application, to recommendation by recommending pannel, surety by HR Officer and finally sanction by Sanctioning officer . After sanction the HR Officer can generate the Office Order and the Payment Advice from the system. After payment of the advance the recovery started through the system.									
	5	Education Loan									
	5.1	The system should have the provision for education loan for self/children and check the required eligibility of employee and the child as per company policy									
	5.2	The system should have the provision for an employee to apply for education loan through workflow									
	5.3	The system should have the provision for sanctioning officer to approve or reject it									
	5.4	The system should have the provision for theHR Officer to generate the Office Order and Payment Advice from the system									
	5.5	The system should have the provision for recovery once the advance made has been made									
	6	Other advances - Computer, furniture , multipurpose etc.									
	6.1	The system should have the provision for applying other advances as per eligibility crieria of the company									
	6.2	The system should have the provision for applying the other advances though Self-Service by specifying the Benefit Plan. On specifying the Benefit Plan the system should automatically checks for his/her eligibility. System also check the surety details & insurance dates									
	6.3	The system should have the provision for workflow for Application as stated below: Application to be sent to the Recommending officer Recommended application to be sent to HR Officer Once the HR Officer Proposes the Application in the Conveyance Advance Panel, Application should be sent to the Sanctioning Officer									
	6.4	The system should have the provision for sanctioning officer to approve or reject it									
	6.5	The system should have the provision for theHR Officer to generate the Office Order and Payment Advice from the system									
	6.6	The system should have the provision for recovery once the advance made has been made									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	6.7	Should have functionality to capture utilisation of all the above advances for specified/ sanction purpose.									
	7	Recruitment & Selection									
	7.1	Maintain Recruitment policy in DMS									
	7.2	Ability to create, maintain and track vacancies									
	7.3	Should support both internal and external candidates									
	7.4	Ability to create advertisements containing vacancy, job description, qualification requirements, category, application fee etc. in required format									
	7.5	Create Notice generation									
	7.6	Ability to maintain applicant database with details like applicant number, personal details, address education, qualifications, position applied for, correspondence details, etc									
	7.7	Ability to generate Roaster for recruitment category wise									
	7.8	Ability to integrate with third party vendor systems (incl payment portals)									
	7.9	Ability to update recruitment evaluation (written / verbal/ trade test results) from vendor system									
	7.10	Ability to perform applicant actions and track applicant status e.g. Call for Interview, shortlist candidate, application rejected, etc.									
	7.11	Ability to store checklist of original documents fulfilling eligibility criteria									
	7.12	Ability to store details of selection board, test center									
	7.13	Ability to send SMS to applicants based on application status									
	7.14	Maintain applicant databank for details of candidates applied along with interview details									
	7.15	Ability to generate correspondence letters for Police department for antecedent verification of candidates in required format									
	7.16	Ability to store Service Agreement Bond details against applicant									
	7.17	• Should provide for defining multiple types of correspondence with applicant • Application fee received, if any, and correspondence with accounting unit • Interview schedule letters • Appointment letters • Regret letters, etc									
	8	Hire, Transfer, Joining, Deputation, Secondment, Promotion, Job Rotation, Disciplinary/Vigilance									
	8.1	The system should have the provision for capturing employee life cycle in the organization									
	8.2	The system should have the provision for correlating the employee lifecycle to major stages of employee employment like Hiring, Promotion, Transfer, Joining, Job Rotation, Deputation In/Out, Secondment, Disciplinary/Vigilance, Separation, sabbatical, study leave, diesnon, company sponserhip, lien, VRS, Premature Retirement etc.									
	8.3	The system should have the provision for capturing all data pertaining to employee, as provided by the employee during Joining formalities along with PF details, Probation details etc.									
	8.4	The system should have the provision for transfer administration system to manage the transfers of employees from one unit to another unit based on employee request, administrative reasons (steps tr order, release order, transfer action, joining order) and job rotation									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	8.5	The system should have the provision for promotion process to cover all the different promotion scenarios across various employee groups as per eligibility criteria									
	8.6	The system should have the provision to maintain lien, return from lien and closure of lien									
	9	Separation									
	9.1	Ability to support all types of separation activities workflow through self service portal									
	9.2	Ability to record separation information in employee records									
	9.3	Should be able to generate check list of items to be submitted by employee									
	9.4	Should be able to generate check about status of Vacation of Company accommodation & submission of electricity charges.									
	9.5	Should be able to generate No Dues Certificate before full and final processing-integrated with Payroll & Disciplinary Action.									
	9.6	Ability to intimate Resignation acceptance to FI via workflow / mail									
	9.7	Ability to record date of submission of resignation letter by an employee									
	9.8	Should generate acceptance letter for resignation									
	9.9	Should validate the Notice period while processing full and final									
	9.10	Should generate and print experience certificate based on record									
	9.11	Should generate letter for PF settlement									
	9.12	Should be able to capture the exit interview details including - Date of exit interview – interview conducted by - Key findings in the Exit Interview									
	9.13	Should be able to support check for no dues status of material issued to employees for final clearance									
	9.14	Should support calculation of amount due as Gratuity, Leave encashment, Insurance maturity, PF, Deductions as per No dues certificate, Bond money as per company policy with statutory compliance.									
	9.15	Should have provision for linking of insurance claim under various head with no due certificate in case reason of separation is death									
	9.16	Capturing the reason of separation with details such as • Provide for classification of separation due to • Resignation -Ability to generate application forms for Payment of Gratuity under 1972 act. • Terminal notice • Death- Form No. 17 • Annuity Scheme – Ability to generate application forms. • Disciplinary action • Voluntary Retirement - Form No.6 and Pension documents Superannuation Premature retirement Compulsory retirement Tenure completion etc.									
	9.17	Should support workflow based separation and intimation to finance department regarding resignation acceptance - Ability to generate applicable gratuity forms									
	9.18	Ability to define online separation process as per VRS guidelines									
	9.19	Ability to route the VRS application through competent approvals									
	9.20	Ability to request for VRS (integrate with Employee Master for check of any pending disciplinary proceedings) as per policy									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response	Name of the offered product along with its version and release date.	Details of proposed ERP Module	Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	9.21	Ability to accept / reject VRS applications by the competent authority and send intimation to the concerned employees					
	9.22	Ability to provide notifications to the employees to apply for service extension by the particular employee					
	9.23	Ability to generate single page bio-data report (promotion case format) for each such employee- Integrate with Promotion, disciplinary cases etc					
	9.24	Ability for employees to apply for service extension online and notify the same to competent Authority.					
	9.25	Ability to maintain database for employees who raised the resignation application (integrate with Employee Master)					
	9.26	Ability to route the resignation request to the competent authority only when signed application is uploaded by the employee for termination of services					
	9.27	Ability to integrate with Payroll module in any mode of separation					
	9.28	Ability to process NDC / clearance from various departments at the time of Exit through e-Exit process					
	9.29	Ability to notify (flag) individuals of any outstanding balances when employee exits (Integrate with Payroll in case of e-Exit process)					
	9.30	Ability to maintain case details of the employees reinstated/reappointed after being terminated - - Integrate with ESS, Payroll					
	9.31	Ability to retrieve details of terminated employees in case he/she is reinstated or reappointed - Integrate with ESS, Payroll.					
	9.32	The system should have the provision for Full & Final settlement which should be linked to Finance payroll system					
	9.33	Relieving letter should get generated only if all dues of the employee are settled					
	10	Probation Monitoring					
	10.1	The systems should have a provision of maintaining checklist for probation closure in the cases of hiring/promotion					
	10.2	The system should have a provision for set up character/antecedent verification report/Vigilance report					
	10.3	The system should have a provision for setting up the Probation period based on action and policy					
	10.4	The system should have a provision for initiation of Probation Review					
	10.5	The system should have a provision for making / providing entry of rating by reporting officer/Review officer/Countersigning authority					
	10.6	The system should have a provision for final Probation Review					
	10.7	The system should have a provision for Probation clearance/extension orders					
	10.8	Provision for escalation in case delay in probation clearance as per policy.					
	10.9	There should be provision for look up period in case delay in promotion					
	11	Performance Management System					
	11.1	The system should have a provision for KPA and Competency based Performance Management System of all the executive levels					
	11.2	The system should have a provision for linking the PMS with Training and Development system, Rewards System and Career Development System					
	11.3	The system should have a provision for integrating PMS with Career Planning, Succession Planning and Job Rotation					

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	11.4	The PMS system should have a provision for Performance planning, which includes: • Involves defining the goals i.e., by defaulting KPAs based on areas of work/ level, etc. • Setting measures and targets • Provision of defaulting KPAs based on defined job codes									
	11.5	The PMS system should have a provision for Mid year review and identification of change in KPAs if any and overall assessment of progress and roadblocks									
	11.6	The system should have a provision for Annual Assessment which includes: • assessment by the reporting officers based on the performance in KPAs, predefined Competencies and Values. • Reviewing Officers moderate and evaluate the marks given by the Reporting Officers									
	11.7	The system should have a provision for Normalization which includes: • Involves formation of clusters (group of departments) • Normalizing the marks obtained by the employees in a cluster									
	11.8	The system provisioned should be easy to use, learn, manage and maintain									
	11.9	The system should have; • Provision to administer the entire ePMS process. • Provision for collecting 360 degree feedback • Provision to capture assessment center data and its analysis • Provision to maintain multiple PMS cycles based on grade or type of employees. Provision to maintain date scheduling exception and reporting exception. Handling transfer/ promotion/ separation cases. • Identified PMS Officer role and authorization to administrate the system. • Maintaining PMS marks in Custom Infotype with access restrictions • Provision to communicate final marks to appraiser and appraises. • Provision to link PMS marks to PRP/pay component. • Ability to generate various reports for monitoring and evaluating the PMS process									
	11.10	There should be a provision of appeal through PMS module									
	12	Training									
	12.1	There should be a provision to meet all the internal / external and foreign training requirements of the employees									
	12.2	There should be a provision for setting up of general and training administration tables									
	12.3	There should be a provision for establishing Training programmes, courses and sessions									
	12.4	There should be a provision for creating a training budget									
	12.5	There should be a provision for determining the Training needs based on PMS forms and Employee requests									
	12.6	There should be a provision generation of training calendar									
	12.7	There should be a provision for administration of course sessions									
	12.8	There should be a provision for enrolment of employees into course sessions through self-service workflow after various approvals as per DOP									
	12.9	There should be a provision to track trainee's training and expenses									
	12.10	There should be a provision to identify training based on the capacity of position of employees									
	12.11	There should be a provision feedback									
	12.12	There should be a provision to accommodate career development									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	12.13	There should be a provision for generating reports and letters									
	12.14	There should be provision for external candidates to apply for training through web enabled interface for residential and non-residential trainings, and allotment of boarding & logging.									
	12.15	There should be provision to capture all cost and receipt against a training module									
	13	Time management- Leave and Attendance									
	13.1	Ability to capture employee in-time and out-time									
	13.2	Ability to integrate with the Biometric time recording system									
	13.3	Ability to process working time based on shift rota and generate time statement and effect payroll									
	13.4	Ability to generate reports in required format.									
	13.5	Should be possible to define the office timings for each office location separately									
	13.6	Should be possible to capture employee-wise days of attendance and leave taken details									
	13.7	• Possible to generate report with details of office time for each employee (department-wise) • Late coming to office • Late sitting • Over time									
	13.8	Should have integration with payroll processing system to transfer data like no. of days present in a month, overtime taken, leaves taken, absent without notice, etc. for the purpose of computation of salary									
	13.9	Separate rules of each kind of leave for approval and utilization as well as combining them.									
	13.10	The system should have the provision for setting up of Absence type and Holiday schedule administration tables									
	13.11	The system should have the provision for entering different Holiday Calendar for shift based employees and General shift employees									
	13.12	The system should have the provision for payment of overtime payment on national holidays for workmen									
	13.13	The system should have the provision for night shift allowance payment									
	13.14	The system should have the provision for establishing the Leave code and rules eg CL, RH, EL, HPL, SAL, Lieu Leave, Diesnon without break in service, EOL, PL, ML, Special CL, Joining Leave, Child Care Leave, Commuted HPL etc									
	13.15	The system should have the provision for approval for different types of leaves (based on DOP application) using workflow i.e employees applies for leave workflow should be generated for the same and goes to employees RO Inbox for approval									
	13.16	The system should have the provision for leave accrual of different types									
	13.17	The system should have the provision for leave encashment									
	13.18	The system should have the provision of application for cancellation of approved leave									
	13.19	The system should have the provision for approving certain leave applications by HR process owners where necessary paper requirement is required like Extra-Ordinary Leave ,Study Leave, Maternity Leave etc.									
	13.20	The system should have the provision for attendance & absence reports of employees									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	13.21	The system should have the provision for generation of various reports as and when required									
	13.22	The system should have the provision for positive punch system implementation for employees where punch system in place									
	13.23	The system should have the provision to capture the attendance and absence of employees in the system (where punching system is not there)									
	13.24	The system should have the provision to capture punch data into the system from external punching system									
	13.25	The system should have the provision for Integration with Payroll module for recovery for unauthorized absence where it is not regularized									
	13.26	The system should have the provision to capture & manage study leaves taken by employee and those sponsored by the company									
	13.27	System should have functionality to pro rate leave quota based on separation/ transfer from a specified location									
	14	Job Profile									
	14.1	The system should have the provision to capture the different Job Profile of a department. All the Job Profile of a department will be unique objects which will be linked to parent department									
	14.2	The system should have the provision such that employee cannot alter the work area entered by him/her if those entries are approved									
	14.3	The system should have the provision for maintaining multiple job profile for a employee for different periods based on posting department/promotion action etc									
	14.4	The system should have the provision for screens to capture Job Profile of an employee, which will display the job profile mentioning details as below and provision to select the different work areas in a period which are related to the department he belongs to									
	14.5	The system should have the provision for generating reports based on individual, job profile and other complex criteria									
	14.6	The system should have the provision for identification of suitable manpower based on various query criteria									
	15	Manpower Planning and Sanction Position Vacancy (SPV)-									
	15.1	Ability to do manpower planning based on location, department, grade, category, etc									
	15.2	Ability to generate planned Vs Actual Manpower report									
	15.3	Ability to generate sanctioned Vs Actual Manpower report									
	15.4	Ability to integrate planned manpower cost with finance for payroll budgeting and financial planning									
	15.5	Should support planning for manpower across all departments at corporate and field level									
	15.6	Facility to define vacancies based on sanctioned strength and existing employee strength for each department/unit/location etc. (Provision for user defined entries should be available)									
	15.7	Ability to view vacancy list at any given date & status of vacancy (Filled/vacant/dying / in process) – Restricted									
	15.8	The system should have the provision for creation and maintenance of Sanctioned, Positioned and Vacant positions and reports thereof									
	16	Local Travel Reimbursement Scheme									
	16.1	The system should have the provision for employee to apply for daily/monthly etc reimbursement of local travel based on workflow approval and entitlement									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	16.2	The system should have the provision for generation of orders, insurance details and driving details etc.									
	16.3	On transfer from one location to another location system should delimit the reimbursement and facilitate re sanctioning as per policy of the company.									
	17	HRA / Company leased residential accomodation									
	17.1	The system should have the provision for processing the HRA , Lease on approval through workflow									
	17.2	The system should have the provision for an employee to avail accommodation which can be either company leased, Self or third party									
	17.3	The system should have the provision for location based/ city category / grade wise entitlement of HRA, Lease									
	17.4	The system should have the provsion for direct payment to third party									
	17.5	The system should have the provision for capturing of lease agreement details									
	17.6	dual accomodation(bachelor accomodation for self and special HRA, Lease any where in india/township accomodation for family) etc.									
	17.7	System should have provision to capture within company owned accomodation head, sub classification for housing type allotted to employee.									
	17.8	System should have functionality to recover excess rent paid over and above employee entitlement for lease cases.									
	17.9	System should have functionality to restrict lease entitlement for joint lease cases (Where employee and employee spouse are working in Jhabua Power Ltd. and are availing lease)									
	17.1	System should restrict house accomodation on transfer from one location to another location									
	17.11	Employee should able to submit request for payment / stoppage of HRA/ Lease through ESS which will get approved through work flow process									
	17.12	System should able to maintain consistency in payment of lease and recovery of licence fee from payroll of the employee									
	18	Careed Dev. Scheme , Talent Managemet									
	18.1	Capturing data for career development, Planning the career path, job rotation/ training /promotion accordingly.									
	18.2	The system should have the provision for capturing assessment center scores									
	18.3	The system should have the provision for mapping of job history and Performance Management (PM) scores for defining the carrer path									
	19	Reports									
	19.1	The system should provide reports on the above processes. Reports like seniority list, HRIS reports, Promotion eligibility reports, Statutory reports, SC/ST roster reports, employee bio-data, department wise- project wise- gradewise manpower reports, etc.									
	19.2	Reports of total Organization Hierarchy Reporting Relationships (Functional, Administrative), Organization Structure Of Corporate Headquarters and Plant locations by Selecting Different Parameters of designation, class, wing, location, category (SC/ST/OBC/Unreserved), male/female, blood group, length of service, age, qualification, experience, department, salary bands, personal, educational & professional details etc.									
	19.3	Reports on list of vacant/excess positions (Integrate With manpower planning module)									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	19.4	Reports on employee counts retired, resigned, suspended, terminated or left, per department, grade-wise, superannuating in a specified period or any past or future date									
	19.5	Reports category wise (SC/ST/OBC/General), on parameters of male / female, on parameters of disability (Full / Partial) etc Organization wise / particular unit wise									
	19.6	Report regarding calculation of vacancies category wise, cadre wise etc. for promotion during a year									
	19.7	Report indicating service particulars and performance grades regarding empanelment for promotion.									
	19.8	Status of compliance of transfer orders of various cadres									
	19.9	Report on transfer history/past services for a particular employee									
	19.10	Reports on status of Executive/Non-executive whether released or not released or whether joined/not joined (along with dates) as per transfers/promotion orders as on particular date or cross section of time									
	19.11	Reports on the total number of employees applied for transfers, number approved/rejected/pending									
	19.12	Reports on count of employees transferred in a specified period in / to / from a specific department / location									
	19.13	Status report of officers/employees who are on probation and yet to be confirmed after promotion.									
	19.14	Reports of the pending departmental enquiry against promotion.									
	19.15	Report of leaves (CL,EL,etc.) availed/leave quota balances pertaining to concerned employee as on date.									
	19.16	Daily Attendance Report (Punch In /Punch Out/Time Data, Late Comers Report, Early Goers Report, Anomaly Report, Report of Absentee/Presented)									
	19.17	Report showing trend of particular employee monthly, fortnightly, quarterly etc.									
	19.18	Reports on no of employees for whom leave has not been approved/declined/modified (in a particular dept/location)									
	19.19	Report/statement showing the details of administrative expense.									
	19.20	Compiled report showing nomination for awards									
	19.21	Report on the medical amount disbursed a year - location wise containing name of the employees, name of diseases etc..									
	19.22	Report on the list of present occupants of the house and list of vacant house - location wise, house type etc.									
	19.23	Report on movable & immovable property details of all employees									
	19.24	Report on status of no of officers who have submitted their PMS report of his own & the employees working under him along with the status of complete work flow.									
	19.25	Employee wise final grading of their appraisal reports since recruitment based on dynamic query.									
	19.26	Report showing how many employees performance is outstanding, very good, good, average, below average with areas of improvement									
	19.27	Information of cases of Departmental Enquiries/Grievances									
	19.28	Ability to provide reports on enquiries pending from last (opening and closing balance) years with details									
	19.29	Information on punishment awarded/acquittal to the respective officers/employees in case of departmental enquiry & court case.									
	19.30	Report on position of pension cases									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	19.31	Detailed Report on no of recruitments in a given period with status of their caste verification, antecedent police verification, medical status etc									
	19.32	Report based on type of recruitment in-house/outsource along with details such as posts advertised, posts filled, applicant count (eligible/ineligible) age details, qualification details etc.									
	19.33	Ability to generate weekly, monthly, quarterly, half yearly, annually report shows name of training (e.g. in-house training, programs attended, institutional training attended, seminar/ conf. attended), no of participants in particular training, name of participants, duration with dates, subjects of training, cost incurred, training report submission & feedback status.									
	19.34	Employee wise qualification/skill /competency/ potential report									
	19.35	Report w.r t. training budget vs. utilization investment on training (current year. previous year. as on date etc)									
	19.36	Report w.r.t. training calendar (planned vs. actual) training programs conducted and programs to be conducted									
	19.37	Report for Officers/employees who have left the company without serving bond period.									
	20	Payroll Processing									
	20.1	Ability to support centralized as well as distributed payroll processing according to location / units									
	20.2	Ability to process arrears based on change in previous payroll data and payments as per policy									
	20.3	Ability to maintain and store monthly as well as one time payments based on two level approval									
	20.4	Ability to post payroll results directly into finance GL's and special GL of the employee vendor									
	20.5	Ability of process both regular and off-cycle payroll									
	20.6	Ability to introduce changes in pay structure (Change in pay commission / adoption of a different pay structure)									
	20.7	The Payroll process shall be done after approval of the exception report									
	20.8	Ability to integrate with the leave module, promotion module, disciplinary module, separation module, time management, loans and advances for calculation of salary									
	20.9	Ability to provide for online test calculation of employees pay slip / salary amount									
	20.10	Order for the Retirement Benefits to be prepared based on the Final Calculations.									
	20.11	Ability to require approval before a specific payment is made to an employee as per competent authority									
	20.12	Ability to Define tax rules to determine employees tax liability as per changes in statutory legislation for actual tax liability of employee									
	20.13	Ability to provide information for actuarial valuation of the employees for determination of contributions to be made by the company towards PRMS, Gratuity, Leave outstanding etc.									
	20.14	Ability to forward the overtime schedule to the competent authority for approval if the amount of overtime is over a defined percentage of the basic salary (Integrate with Time Management Module)									
	20.15	Ability to lock master data while payroll execution									
	20.16	Ability to default standard holiday data, as well as user-defined holiday data									
	20.17	Ability to integrate with leave, disciplinary cases module for calculation of retirement benefits									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	20.18	Ability to support calculation of incremental arrears with consequent tax adjustments									
	20.19	Ability to make deductions effective: In the current period, In any pay period or periods selected, In any user-defined frequency selected, Between user-defined start and end dates, Until an user defined limit is reached									
	20.2	System should maintain history of salary of employees									
	20.21	Exceptional reporting for month-on-month variation (financial non-financial)									
	20.22	Provision to allocate cost of employee based on his/her associated department/unit									
	20.23	Ability to have a data upload facility to upload historical payroll data for specified period									
	20.24	Allow for input of start and end date for recurring payment / deduction									
	20.25	Ability to compute the payment to be made to the employee during the suspension period (there should be a field to record the privileges/ deductions to the employee 50%, 75% etc. which varies on a case to case basis)									
	20.26	Ability to have a full and Final settlement process in place									
	20.27	Ability to allow a final settlement report for each separated employee with a TAG for completion of F&F settlement in system									
	20.28	Ability to prepare the Computation Sheet and checklist (for eg. at the time of Retirement preparation of the Calculation sheet for Retirement Order and verify the checklist for leave adjusted or not, advances, loans cleared or not, etc.)									
	20.29	Reminders/ Notification to the employee for change or requirement of any additional data through mails/ SMS/ self service etc.									
	20.3	Should allow recording of salary structure for each employee, based on pre-determined business rules and multiple salary heads									
	20.31	Should support defining of minimum wage									
	20.32	The system should allow capture of salary structures grade wise									
	20.33	Should support calculation of standard and overtime rates for employee worked overtime & C-off payments									
	20.34	Should support inclusion of Bonus as per Bonus Acts									
	20.35	Should have facility for EL leave encashment at the time of retirement / separation									
	20.36	Should support localized and configurable statutory norms for PF, ESI, Income Tax, Leave registers, Bonus statements, Government Labour laws etc. and any statutory reporting should be part of the same									
	20.37	Ability to export the payroll to an excel sheet/pdf/on line encrusted data transfer as per bank requirements									
	20.38	Allow for integration with Financial Accounting procedures									
	20.39	Facilitate computation of the final settlement claim of the employees based on No Dues received and the outstanding in Spl GL of the employee vendor									
	20.4	In case of change of location of employee/transfer, proper impact in the books of accounts should be made to record the salary, balance of loans, recovery status to the new location from the date of transfer. Proper integration with Transfer module									
	20.41	Should have functionality for location, grade, time based payment/ recovery (fixed amount or % of pay) from employees without employee level data maintenance.									
	20.42	Should have functionality to release annual regular increment which may be in terms of % or fixed grade wise amount or pay matrix									
	20.43	Should able to release stagnation increment based on PMS score and other parameters									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	20.44	Should be able to restrict basic pay for penalty cases									
	20.45	Should have functionality to release promotion increment which may be in terms of % or fixed grade wise amount or pay matrix									
	20.46	Should be able to get request in ESS from employee for selection of pay component under grade based fixed % of cafeteria option									
	20.47	Should be able to create employee vendor code based on data maintained for address, bank account, cost centre, PAN etc									
	20.48	Should have functionality to update off cycle data									
	20.49	Should be able to receive request for start/ stop of Voluntary Provident Fund recovery in ESS									
	20.5	Should be able to receive request for start/ stop of Voluntary Pension recovery in ESS									
	20.51	Should have checks for HR master grade and pay master grade.									
	20.52	Should be able to provide component wise taxable salary breakup with perquisite detail in ESS									
	20.53	Should be able to support payment of PRP as per government (DPE) guidelines.									
	20.54	Should have facility for HPL encashment at the time of retirement / separation as per policy of the company									
	20.55	Should provide pay slip in PDF format with facility of generic message for all the employee or specific message to selected employee.									
	20.56	Retro payroll should take place from a date for which master changes have been done in current payroll									
	20.57	Ability to generate pay slip with following detail: Taxable and non-taxable components in separate columns, Tax till date, Calculated, Recovered, Projected, Loan balances and no. of installments deducted / left.									
	20.58	Should facilitate third party recoveries posting to the respective vendor with schedule of total recovery during the period									
	20.59	Ability to generate Employee-wise recovery position, recovery list and outstanding balances list - month-wise or as user defined									
	20.6	Ability to support recovery of all types of loans with reports like recoveries made, overdue list etc.									
	20.61	Ability to attach loan sanctioning rules to every loan type (eg. Interest bearing loan such as House Advance and non – interest bearing advances as TA Advance, medical advance etc.									
	20.62	Ability to support tour advance and expense settlement through an self service based approval process.									
	20.63	Ability to update reimbursement information in payroll once expense is approved.									
	20.64	The system should be able to capture entitlements for various reimbursements (car, mobile, residential assets and monthly expenditure claim etc)									
	20.65	Should have facility to process Medical/ LTA / TA / TTA claims and taxability status of the claim									
	20.66	Should be able to generate information on loans and advances taken by employee									
	20.67	Should be able to calculate interest on simple interest basis for various loan slab of a loan									
	20.68	Payment of off cycle should be period restricted i.e once a week or a month for claims and regularly for advances									
	20.69	Should be able to receive request for change in loan installment in ESS									
	20.7	Should be able to receive request for part/ total refund of loan through external means (cheque/ credit card etc.) in ESS									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
	20.71	Should have functionality to delimit the end date of loan on complete payment of the principal loan									
	20.72	Should have functionality to creation of interest loan on completion of principal loan as per policy of the company									
	20.73	Should have functionality to delimit the end date of loan on complete payment of the interest loan									
	20.74	Should be able to provide exception for difference in loan as per HCM and FI (employee subledger Spl GL)									
	20.75	Should be able to address INDAS provision for discounting of loan and accounting thereof									
	20.76	Ability to process statutory contributions, calculation & deductions as per law of the land e.g. PF, ESI, Professional tax, Income Tax , labour welfare tax etc with cheks for TAN, EPS membership									
	20.77	Ability to store investment declaration through self-service portal by individual employees which will have status like proposed saving , actual saving approved based on work flow process									
	20.78	Ability to store proposed and actual declarations and process income tax based on the same thpugh ESS functionality and work flow									
	20.79	Ability to generate all statutory reports as per specified format									
	20.8	Ability to do perquisite calculations for loan, housing , medical allowance, pension etc..									
	20.81	Ability to store CLA/COA/Rented accommodation types and calculate perquisite / tax exemption based on the same									
	20.82	Should be possible to capture details of income and income/ loss from house property declared by employee in ESS									
	20.83	Should have all savings related checks like house completion date and 5 year restriction for pre construction interest, restricting interest rebate to Rs.30000 in case of more than 5 years / 3 years elapsed during construction etc.									
	20.84	Ability to handle employer bearing full/ part of housing perquisite as per incoem tax provision. This should be linke with period.									
	20.85	Should be able to address multiple Form 16/ form 24 based on TAN within one company code									
	20.86	Should facilitate print of employee external savings , income , loss from hous property, rent receipt for HRA as per format given in Incoem tax act.									
	20.87	Ability to notify the particular employee for the admissible amount in case of medical / travel reimbursements as per employee grade wise									
	20.88	Should facilitate view of claim status by employee under various stages of approval in ESS									
	20.89	Should facilitate view by employee in ESS for entitlement of employee for various claim & reimbursement including item under Sr. Executive residential items									
	20.9	Should have facility to restrict claim beyond a period for a given Financial year. This period may be beyond FY									
	20.91	Should have provision for transfer of claim/ advance request to other approver after submission of claim in ESS									
	20.92	Should have functionality ro provide for substitute approver for claim/ advances work flow									
	20.93	Ability to generate insurance reports									

Module wise number of functional requirements	SN	Functionality Description	Bidder's Response				Name of the offered product along with its version and release date.	Details of proposed ERP Module		Specify the file name uploaded as Supporting document	Specify the Document Name along with Page No at which the requisite document is attached in the Hard Copy of the Submitted Bid Document
			S - Standard C - Customization/Configuration TP - Third-Party Solution NS - Not Supported / No Solution								
	20.94	In case the administrative approvals/finance approvals are delayed beyond a certain period of the retirement due date, the notifications should be send to the respective authorities.									
	20.95	Ability to generate GSLIS & LIC report as per requirement									
	20.96	• Should have facility to track GPAIP (Group Personnel Accident Insurance Policy) with following: • Yearly premium • Additional / reduced Premium based on addition / reduction in number of employees and endorsements • Coverage opted for • Renewal due on • Accidents, if any • Details of accidents • Claims settled for • Should support capture of medi claim policy details • premium details • policy details • status of claims made
